“A good read for anyone who wants to understand what actually determines whether a developing economy will succeed” (Bill Gates, “Top 5 Books of the Year”). An Economist Best Book of the Year from a reporter who has spent two decades in the region, and who The Financial Times said “should be named chief myth-buster for Asian business.” In *How Asia Works*, Joe Studwell distills his extensive research into the economies of nine countries—Japan, South Korea, Taiwan, Indonesia, Malaysia, Thailand, the Philippines, Vietnam, and China—into an

accessible, readable narrative that debunks Western misconceptions, shows what really happened in Asia and why, and for once makes clear why some countries have boomed while others have languished. Studwell's in-depth analysis focuses on three main areas: land policy, manufacturing, and finance. Land reform has been essential to the success of Asian economies, giving a kick-start to development by utilizing a large workforce and providing capital for growth. With manufacturing, industrial development alone is not sufficient, Studwell argues. Instead, countries need "export discipline," a government that forces companies to compete on the global scale. And in finance, effective regulation is essential for fostering, and sustaining growth. To explore all of these subjects, Studwell journeys far

This volume, and its companion, Industrial Technology Development in Malaysia, examine and evaluate Malaysian industrialization in terms of its experience of and prospects for industrial technology development. The purpose of this collective book is to present a non-exhaustive survey of sp- related phenomena in semiconductors with a focus on recent research. In some sense it may be regarded as an updated version of the Optical Orientation book, which was entirely devoted to spin physics in bulk semiconductors. During the 24 years that have elapsed, we have witnessed, on the one hand, an extraordinary development in the wonderful semiconductor

physics in two dimensions with the accompanying revolutionary applications. On the other hand, during the last maybe 15 years there was a strong revival in the interest in spin phenomena, in particular in low-dimensional semiconductor structures. While in the 1970s and 1980s the entire world population of researchers in the field never exceeded 20 persons, now it can be counted by the hundreds and the number of publications by the thousands. This explosive growth is stimulated, to a large extent, by the hopes that the electron and/or nuclear spins in a semiconductor will help to accomplish the dream of factorizing large numbers by quantum computing and eventually to develop a new spin-based electronics, or “spintronics”. Whether any of this will happen or not, still remains to be seen. Anyway, these ideas

have resulted in a large body of interesting and exciting research, which is a good thing by itself. The field of spin physics in semiconductors is extremely rich and interesting with many spectacular effects in optics and transport.

“An entertaining, if cautionary, tale of Western business woes in China, stretching back seven hundred years” (The Wall Street Journal). In *The China Dream*, acclaimed business journalist Joe Studwell challenges the predictions that China will become an economic juggernaut on the world stage in the twenty-first century—and instead foresees an economic crisis. Tracing the most recent developments in China from Deng Xiaoping’s “liberalization” of its market in the 1980s through the opening of its economy to foreign investment in the

1990s, Studwell examines the roadblocks to the continuation of the country's unprecedented expansion and why its economy will fail once more—but this time, harder than ever before, and with potentially catastrophic results. Provocative and flawlessly researched, *The China Dream* analyzes what's really going on in China—and what we can do to prepare for the coming crisis. “The much-needed antidote to the delusions . . . about the riches to be made from investing and selling in China. Brimming with . . . statistics.” —The Washington Post “[A] detailed account . . . An excellent examination of the political and economic history of China, fascinating and mostly unknown to Westerners.” —Booklist (starred review) “Lays bare much of the stuff and nonsense that surrounds the China dream, and traces how myth and

misunderstandings—compounded by hype and lashings of snake oil—have bewitched some of the world’s most respected corporations and led them to ruin the proverbial \$1.3 billion consumer market . . . As such, it deserves to help redefine the debate on the nature of the China market.”

This book is open access under a CC BY-NC-ND license. This volume analyzes the economic, social, and political challenges that emerging states confront today. Notwithstanding the growing importance of the ‘emerging states’ in global affairs and governance, many problems

requiring immediate solutions have emerged at home largely as a consequence of the rapid economic development and associated sociopolitical changes. The middle-income trap is a major economic challenge faced by emerging states. This volume regards interest coordination for technological upgrading as crucial to avoid the trap and examines how various emerging states are grappling with this challenge by fostering public-private cooperation, voluntary associations of market players, and/or social networks. Social disparity is another serious problem. It is deeply rooted in history in the emerging states such as South Africa and many Latin American countries. However, income distribution is recently deteriorating even in East Asia that was once praised for its high economic growth with equity. Increasing pressure for

political opening is another challenge for emerging states. This volume argues that the economic, social, and political problems are interwoven in the sense that the emerging states need to build political consensus in order to tackle the economic and social difficulties. Democratic institutions have not always been successful in this respect.
