This book provides a practically-oriented introduction to high-level programming language implementation. It demystifies what goes on within a compiler and stimulates the reader's interest in compiler design, an essential aspect of computer science. Programming language analysis and translation techniques are used in many software application areas. A Practical Approach to Compiler Construction covers the fundamental principles of the subject in an accessible way. It presents the necessary background theory and shows how it can be applied to implement complete compilers. A step-by-step approach, based on a standard compiler structure is adopted, presenting up-to-date techniques and examples. Strategies and designs are described in detail to guide the reader in implementing a translator for a programming language. A simple high-level language, loosely based on C, is used to illustrate aspects of the compilation process. Code examples in C are included, together with discussion and illustration of how this code can be extended to cover the compilation of more complex languages. Examples are also given of the use of the flex and bison compiler construction tools. Lexical and syntax analysis is covered in detail together with a comprehensive coverage of semantic analysis, intermediate representations, optimisation and code generation. Introductory material on parallelisation is also included. Designed for personal study as well as for use in introductory undergraduate and postgraduate courses in compiler design, the author assumes that readers have a reasonable competence in programming in any high-level language.

Twenty years ago I set out to photograph children all around the world. My first trip was to the south of India. I started in the province of Tamil Nadu, first living in a Church Women Centre in the city of Chennai, then in Mugaiyur, a small village. For six months I took pictures and had conversations with roommates, guides, and members of the families who had taken me in as a guest. I had very many questions, as did they. After children, the main subject was always love. Everything I heard from them and saw around me there filled me with both surprise and doubt, but above all with admiration. I admired their courage and faith. Their arranged marriages were a fascinating mystery to me. One way to understand arranged marriages was to make portraits. I photographed women and men various ages, engaged or planned couples and married couples.

On the rodeo circuit, B.J. Lambert had plenty of chances to forget about his first love.
