## Focus

Very briefly, autofocus requires that the camera set the point of focus in your image. Whereas manual focus works by letting you determine the point of focus.

Manual Focus Versus Autofocus: Which One Should I Use?

# Online Library Autofocus And Manual Focus

Autofocus and manual focus do the same thing. Both adjust the focus of the camera lens. But, with autofocus, the camera determines the sharpest focus using sensors devoted to measuring it. In autofocus mode, the photographer doesn't have to do anything.

DSLR Autofocus vs. Manual Focus -  
Lifewire

Manual focus is best used for photographing low light scenes, because oftentimes the camera's sensor will have a rough time finding the subject because of the limited light! Manual focus is also used to capture the night sky and

# Online Library Autofocus And Manual Focus

starscapes because autofocus cannot focus to infinity in order to capture those twinkling lights.

## Manual Focus vs Autofocus Camera Harmony

In a manual focus camera, movements to the lens ring adjust the angle of two

# Online Library Autofocus And Manual Focus

mirrors. The two images this produces will eventually line up, bringing the scene into focus. Autofocus works on this same principle, however instead of the user judging when the image is in focus, the camera uses an electronic sensor to do the same job.
