

## C 1s 2s 2p 3s 3p 4s C

Eventually, you will unquestionably discover a supplementary experience and talent by spending more cash. yet when? complete you assume that you require to get those every needs afterward having significantly cash? Why don't you try to get something basic in the beginning? That's something that will lead you to understand even more around the globe, experience, some places, similar to history, amusement, and a lot more?

It is your very own era to operate reviewing habit. in the midst of guides you could enjoy now is **c 1s 2s 2p 3s 3p 4s c** below.

C 1s 2s 2p 3s

As an example, the ground state configuration of the sodium atom is  $1s^2 2s^2 2p^6 3s^1$ , as deduced from the Aufbau principle (see below). The first excited state is obtained by promoting a 3s electron to the 3p orbital, to obtain the  $1s^2 2s^2 2p^6 3p^1$  configuration, abbreviated as the 3p level. Atoms can move from one configuration to ...

---

Electron configuration - Wikipedia

This decides the electron capacity of the shells. The K shell contains a 1s subshell hence it can carry 2 electrons, the L shell has 2s and 2p, and can carry 8 electrons. The M shell contains 3s, 3p, and 3d, and can carry 18 electrons. The N shell containing 4s, 4p and 4d, can carry 32 electrons.

---

Electron Configuration Chart for All Elements in the ...

However there are numerous exceptions; for example the lightest exception is chromium, which would be predicted to have the configuration  $1s^2 2s^2 2p^6 3s^2 3p^6 3d^4 4s^2$ , written as  $[\text{Ar}] 3d^4 4s^2$ , but whose actual configuration given in the table below is  $[\text{Ar}] 3d^5 4s^1$ .

Electron configurations of the elements (data page ...

An atom has the electron configuration  $1s^2 2s^2 2p^6 3s^2 3p^5$ . The electron dot symbol for this element is? a. X surrounded by seven dots. b. X surrounded by five dots. c. X surrounded by two dots. d. X surrounded by three dots. Explanation please?? :) Answer Save. 1 Answer. Relevance. Genuine. Lv 5. 8 years ago.

---

An atom has the electron configuration  $1s^2 2s^2 2p^6 3s^2$  ...

A.  $1s^2 2s^1$ . B.  $1s^2 2s^2 2p^5$ . C.  $1s^2 2s^2 2p^6 3s^2$ . D.  $1s^2 2s^2 2p^6 3s^2 3p^1$ . Answer Save. 1 Answer. Relevance. William. 4 years ago. Favorite Answer. B (fluorine) B needs to gain one more electron to complete its p orbitals and thus its second shell. It can do this by taking an electron from sodium (forming an ionic bond). Sodium will ...

---

If sodium (Na) has an electron configuration of  $1s^2 2s^2$  ...

A.  $1s^2 2s^2 2p^6 3s^2$  B.  $1s^2 2s^2 2p^6 3s^2 3d^4$  C.  $1s^2 2s^2$  ...” in ? Chemistry if there is no answer or all answers are wrong, use a search bar and try to find the answer among similar questions.

2p 5 b)  $1s^2 2s^1$  c)  $1s^2 2s^2 2p^6$  d)  $1s^2 s^2 2p^6 3s^2 3p^5$  ...

2s shields the atom better than 2p because the s orbitals is much closer and surrounds the nucleus more than the p orbitals, which extend farther out. 3p shields better than 3d, because p orbitals are closer to the nucleus than the 3d orbitals.
