---

C++ Templates - The Complete Guide, 2nd Edition

Templates are the foundation of generic programming, which involves writing code in a way that is independent of any particular type. A template is a blueprint or formula for creating a generic class or a function. The library containers like iterators and algorithms are examples of generic programming and have been developed using template ...

C++ Templates - Tutorialspoint

Generate the "real" C files from the template.c files. You will have one Makefile entry per template target e.g. code.generated.c. sed is a good substitution tool, but you could also use e.g. replace or awk or any of their Windows equivalents; As appropriate, compile the generated C files and link the generated objects

---

Are there templates in the C programming language? - Stack ...

Bjarne Stroustrup: Yes. When you say, "template type T," that is really the old mathematical, "for all T." That's the way it's considered. My very first paper on "C with Classes" (that evolved into C++) from 1981 mentioned parameterized types. There, I got the problem right, but I got the solution totally wrong.

Amazon.com: Customer reviews: C++ Templates: The Complete ...

In C, a similar form of replacement of parameters could be attempted using the macro processor. Templates, however, are far more structured than macros, which should be avoided in C++. Readers who know -calculus may notice the similarity of template instantiation to -reduction via substitution: we may read `template<typename T>` as analogous to `T`. 4
