The most balanced coverage of Computer Aided Design and Manufacture available! Providing a balanced coverage of both aspects of CAD/CAM, this book explores the processes of defining a product design with the aid of computers, of developing manufacturing plans and instructions for the product, and of managing the manufacturing system itself. The book has been thoroughly updated and expanded for this second edition and the mix of theory, practice and analysis makes it suitable for both analytical and overview courses. This book provides an ideal core text for CAD/CAM courses at undergraduate degree level in Industrial, Mechanical, Manufacturing and Production Engineering.

This edition has been thoroughly

revised and updated in order to remain in conformity with the course requirements and provide the recent and contemporary technological progress in the respective areas. In all, the text would serve as the most updated one in the field of CAD/CAM.

Providing an integrated presentation of the application of computers to product design and manufacture, this book concentrates on the theme that CAD/CAM involves the use of computers to create, manipulate and apply models of engineering products and systems. It guides the reader through the process of defining a product design with the aid of a computer, then developing manufacturing plans and instructions for the product from the design, and finally planning and controlling the

operation of the manufacturing system itself. The book is intended for courses in mechanical and manufacturing systems, and industrial engineering that use CAD and CAM.

This text is suitable for an introduction to CAD/CAM taught in departments of mechanical engineering. The book combines a good balance of the three main ingredients of CAD/CAM: computer science, engineering design and applications, and industrial implementations and technology.

The book is the complete introduction and applications guide to this new technology. This book introduces the reader to features and gives an overview of geometric modeling techniques, discusses the conceptual development of features as modeling

entities, illustrates the use of features for a variety of engineering design applications, and develops a set of broad functional requirements and addresses high level design issues.

Manufacturing a product is not difficult, the difficulty consists in manufacturing a product of high quality, at a low cost and rapidly. Drastic technological advances are changing global markets very rapidly. In such conditions the ability to compete successfully must be based on innovative ideas and new products which has to be of high quality yet low in price. One way to achieve these objectives would be through massive investments in research of computer based technology and by applying the approaches presented in this book. Advanced Manufacturing Systems and Technology AMST87 was held in Opatija (Croatia) in October 1987. The Second International Conference on Advanced Manufacturing Systems and Technology AMSV90 was held in Trento (Italy) in June 1990. The Third, Fourth, Fifth and Sixth Conferences on Advanced Manufacturing Systems and Technology were all held in Udine (Italy) as follows: AMST93 in April 1993, AMST96 in September 1996, AMST99 in June 1999 and AMST02 in June 2002.

The impact of the technology of Computer-Aided Design and Manufacturing in automobile engineering, marine engineering and aerospace engineering has been

tremendous. Using computers in manufacturing is receiving particular prominence as industries seek to improve product quality, increase productivity and to reduce inventory costs. Therefore, the emphasis has been attributed to the subject of CAD and its integration with CAM. Designed as a textbook for the undergraduate students of mechanical engineering, production engineering and industrial engineering, it provides a description of both the hardware and software of CAD/CAM systems. The Coverage Includes

- Principles of interactive computer graphics
- Wireframe, surface and solid modelling
- Finite element modelling and analysis
- NC part programming and computer-aided part programming
- Machine vision systems
- Robot technology and automated guided vehicles
- Flexible
