Brisk history of Western Civilization, an a fine counterpoint to the linear, triumphalist narrative we grow up in. Of course, it's short (500 pages) considering its subject, so it leaves quite a bit out. And he's wrong about Beethoven, who, contrary to Osborne, ended up hating Napoleon. Getting something wrong with Beethoven is unconscionable.

Ever since the attacks of 11th September, western leaders have described a world engaged in 'a fight for civilization'. But what do we mean by civilization? We believe in a western tradition of openness and freedom that has produced a good life for many millions of people and a culture of enormous depth and creative power. But the history of our civilisation is also filled with unspeakable brutality - for every Leonardo there is a Mussolini, for every Beethoven symphony a concentration camp, for every Chrysler building a My Lai massacre. How can we come to the defence of a civilisation whose benefits seem so questionable? In this ambitious and important book Roger Osborne shows that we can only truly understand our civilization by re-examining and confronting our past, with all its glories and catastrophes. Sweeping in its scope and comprehensive in its coverage, Civilization tells the story of the western world from its origins to the present. At such a dangerous time in the world's history, this brilliant book is required reading.

From the bestselling author of *The Ascent of Money* and *The Square and the Tower* "A dazzling history of Western ideas." "The Economist" "Mr. Ferguson tells his story with characteristic verve and an eye for the felicitous phrase." "Wall Street Journal" "[W]ritten with vitality and verve . . . a tour de force." "Boston Globe" Western civilization's rise to global dominance is the single most important historical phenomenon of the past five centuries. How did the West overtake its Eastern rivals? And has the zenith of Western power now passed? Acclaimed historian Niall Ferguson argues that beginning in the fifteenth century, the West developed six powerful new concepts, or "killer applications"—competition, science, the rule of law, modern medicine, consumerism, and the work ethic—that the Rest lacked, allowing it to surge past all other competitors. Yet now, Ferguson shows how the Rest have downloaded the killer apps the West once monopolized, while the West has literally lost faith in itself. Chronicling the rise and fall of empires alongside clashes (and fusions) of civilizations, *Civilization: The West and the Rest* recasts world history with force and wit. Boldly argued and teeming with memorable characters, this is Ferguson at his very best.

A comprehensive account of how energy has shaped society throughout history, from pre-agricultural foraging societies through today's fossil fuel-driven civilization. "I wait for new Smil books the way some people wait for the next 'Star Wars' movie. In his latest book, *Energy and Civilization: A History*, he goes deep and broad to explain how innovations in humans' ability to turn energy into heat, light, and motion have been a driving force behind our cultural and economic progress over the past 10,000 years." Energy is the only universal currency; it is necessary for getting anything done. The conversion of energy on Earth ranges from terra-forming forces of plate tectonics to cumulative erosive effects of raindrops. Life on Earth depends on the photosynthetic conversion of solar energy into plant biomass. Humans have come to rely on many more energy flows—ranging from fossil fuels to photovoltaic generation of electricity—for their civilized existence. In this monumental history, Vaclav Smil provides a comprehensive account of how energy has shaped society, from pre-agricultural foraging societies through today's fossil fuel—driven civilization. Humans are the only species that can systematically harness energies outside their bodies, using the power of their intellect and an enormous variety of artifacts—from the simplest tools to internal combustion engines and nuclear reactors. The epochal transition to fossil fuels affected everything: agriculture, industry, transportation, weapons, communication, economics, urbanization, quality of life, politics, and the environment. Smil describes humanity's energy eras in panoramic and interdisciplinary fashion, offering readers a magisterial overview. This book is an extensively updated and expanded version of Smil's *Energy in World History* (1994). Smil has incorporated an enormous amount of new material, reflecting the dramatic developments in energy studies over the last two decades and his own research over that time.

Forgetfulness occurs when those who have been long inured to civilized order can no longer remember a time in which they had to wonder whether their crops would grow to maturity without being stolen or their children sold into slavery by a victorious foe....They forget that in time of danger, in the face of the enemy, they must trust and confide in each other, or perish....They forget, in short, that there has ever been a category of human experience called the enemy. "That, before 9/11, was what had happened to us. The very concept of the enemy had been banished from our moral and political vocabulary. An enemy was just a friend we hadn't done enough for yet. Or perhaps there had been a misunderstanding, or an oversight on our part -- something that we could correct.... "Our first task is therefore to try to grasp what the concept of the enemy really means. The enemy is someone who is willing to die in order to kill you. And while it is true that the enemy always hates us for a reason, it is his reason, and not ours." So begins *Civilization and Its Enemies*, an extraordinary tour de force by America's "reigning philosopher of 9/11," Lee Harris. What Francis Fukuyama did for the end of the Cold War, Lee Harris has now done for the next great conflict: the war between the civilized world and the international terrorists who wish to destroy it. Each major turning point in our history has produced one great thinker who has been able to step back from petty disagreements and see the bigger picture -- and Lee Harris has emerged as that man for our time. He is the one who has helped make sense of the terrorists' fantasies and who forces us most strongly to confront the fact that our enemy -- for the first time in centuries -- refuses to play by any of our rules, or to think in any of our categories. We are all naturally reluctant to face a true enemy. Most of us cannot give up the myth that tolerance is the greatest of virtues and that we can somehow convert the enemy to our beliefs. Yet, as Harris's brilliant tour through the stages of civilization demonstrates, from Sparta to the French Revolution to the present, civilization depends upon brute force, properly wielded by a sovereign. Today, only America can play the role of sovereign on the world stage, by the use of force when necessary. Lee Harris's articles have been hailed by thinkers from across the spectrum. His message is an enduring one that will change the way readers think -- about the war with Iraq, about terrorism, and about our future.

Michel Foucault examines the archeology of madness in the West from 1500 to 1800 - from the late Middle Ages, when insanity was still considered part of everyday life and fools and lunatics walked the streets freely, to the time when such people began to be considered a threat, asylums were first built, and walls were erected between the "insane" and the rest of humanity.

A monumental, wholly accessible work of scholarship that retells human history through the story of mankind's relationship with the sea. An accomplishment of both great sweep and illuminating detail, *The Sea and Civilization* is a stunning work of history that reveals in breathtaking depth how people first came into contact with one another by ocean and river, and how goods, languages, religions, and entire cultures spread across and along the world's waterways. Lincoln Paine takes us back to the origins of long-distance migration by sea with our ancestors' first forays from Africa and Eurasia to Australia and the Americas. He demonstrates the critical role of maritime trade to the civilizations of ancient Egypt and Mesopotamia, and the Indus Valley. He reacquaints us with the great seafaring cultures of antiquity like those of the Phoenicians and Greeks, as well as those of India, Southeast and East Asia who parlayed their navigational skills, shipbuilding techniques, and commercial acumen to establish vibrant overseas colonies and trade routes in the centuries leading up to the age of European overseas expansion. His narrative traces subsequent developments in commercial and naval shipping through the post-Cold War era. Above all, Paine makes clear how the rise and fall of civilizations can be traced to the sea.

INSTANT NEW YORK TIMES BESTSELLER A dramatically new understanding of human history, challenging our most fundamental assumptions about social evolution—from the development of agriculture and cities to the origins of the state, democracy, and inequality—and revealing new possibilities for human emancipation. For generations, our remote ancestors have been cast as primitive and childlike—either free and equal innocents, or thuggish and warlike. *Civilization*, we are told, could be achieved only by sacrificing those original freedoms or, alternatively, by taming our baser instincts. David Graeber and David Wengrow show how such theories first emerged in the eighteenth century as a conservative reaction to powerful critiques of European society posed by Indigenous observers and intellectuals. Revisiting this encounter has startling implications for how we make sense of human history today, including the origins of farming, property, cities, democracy, slavery, and civilization itself. Drawing on pathbreaking research in archaeology and anthropology, the authors show how history becomes a far more interesting place once we learn to throw off our conceptual shackles and perceive what's really there. If humans did not spend 95 percent of their evolutionary past in tiny bands of hunter-gatherers, what were they doing all that time? If agriculture, and cities, did not mean a plunge into hierarchy and domination, then what kinds of social and economic organization did they lead to? The answers are often unexpected, and suggest that the course of human history may be less set in stone, and more full of playful, hopeful possibilities, than we tend to assume. *The Dawn of Everything* fundamentally transforms our understanding of the human past and offers a path toward imagining new forms of freedom, new ways of organizing society. This is a monumental book of formidable intellectual range, animated by curiosity, moral vision, and a faith in the power of direct action. Includes Black-and-White Illustrations

The perfect St. Patrick's Day gift, and a book in the best tradition of popular history -- the untold story of Ireland's role in maintaining Western culture while the Dark Ages settled on Europe. Every year millions of Americans celebrate St. Patrick's Day, but they may not be aware of

how great an influence St. Patrick was on the subsequent history of civilization. Not only did he bring Christianity to Ireland, he instilled a sense of literacy and learning that would create the conditions that allowed Ireland to become "the isle of saints and scholars" -- and thus preserve Western culture while Europe was being overrun by barbarians. In this entertaining and compelling narrative, Thomas Cahill tells the story of how Europe evolved from the classical age of Rome to the medieval era. Without Ireland, the transition could not have taken place. Not only did Irish monks and scribes maintain the very record of Western civilization -- copying manuscripts of Greek and Latin writers, both pagan and Christian, while libraries and learning on the continent were forever lost -- they brought their uniquely Irish world-view to the task. As Cahill delightfully illustrates, so much of the liveliness we associate with medieval culture has its roots in Ireland. When the seeds of culture were replanted on the European continent, it was from Ireland that they were germinated. In the tradition of Barbara Tuchman's *A Distant Mirror*, *How The Irish Saved Civilization* reconstructs an era that few know about but which is central to understanding our past and our cultural heritage. But it conveys its knowledge with a winking wit that aptly captures the sensibility of the unsung Irish who relaunched civilization. **BONUS MATERIAL:** This ebook edition includes an excerpt from Thomas Cahill's *Heretics and Heroes*.
