are developed,
the statutes and

that have

hazards, and the

foundations of
the policies. It
lays out
policies for
what is
considered the
major
environmental
physical hazards
to human health.
Specifically,

Public Health
Barry Levy
the authors describe hazards from air, water, food, hazardous substances, and wastes. To this list the authors have added the additional concerns from climate change, tobacco products, genetically-modified

organisms, environment-related diseases, energy production, biodiversity and species endangerment, and the built environment. And as with the first edition, histories of policymaking for specific

environmental
hazards are
portrayed. This
edition differs
from its
antecedent in
three
significant
themes. Global
perspectives are
added to
chapters that
describe
specific

environmental
hazards, e.g.,
air pollution
policies in
China and India.
Also there is
the material on
the consequences
of environmental
hazards on both
human and
ecosystem
health.
