A contract (or an agreement) is associated with almost everything, wherein more than one person (or party) is involved. Whether it's a marriage, purchase of a property or construction of a project, all need a proper contract and in-turn, they need resilient and robust contract administration. Today, large value and complex contracts have to cater to the needs of globalization, increased regulations and

the ever-changing technologies. These complexities have contributed to an environment rendering administration of a contract difficult. Therefore, projects are prone to delays, additional unforeseen expenses and may also all-together lead to a project failure. This has also led many organizations to view a contract as a tool to have undue control by imposing rigid standards and conditions oblivious to the fact that these may not always be to their advantage. It is with this intent that this book has been written by an experienced contracts manager, who has had a first-hand experience of the struggle, while going through a jargon of clauses and documents within a contract.. The “basis of expectations” requires an overall understanding of the contract and the author expects that this book comes handy to such a professional in his/her pursuit of excellence.

The theory of networks aims at developing theoretical views on the design and management of alliances, franchise chains, licensing, joint ventures, cooperatives, and venture capital relations. The current trend in economics and management of networks is twofold: First there is a strong tendency toward application of theoretical approaches developed both in organizational economics, strategic management and organization theory. The second trend refers to the development of more integrative views on networks. Especially, combining organizational economics, strategic management and relational views on networks are very promising research directions. Starting from this status of research, the current book emphasizes network research as a theory-driven field by offering new perspectives on contract design, decision and ownership rights, value creation, knowledge management and the role of social capital in franchising networks, alliances and cooperatives.

understanding, and impractical skillset that investment managers need. Understand derivatives strategies and models from basic to advanced Apply Bloomberg information and analytical functions Learn how investment decisions are made in the real world Grasp the complexities of securities evaluation, selection, and management The financial and academic developments of the past twenty years have highlighted the challenge in acquiring a comprehensive understanding of investments and financial markets. Derivatives provides the detailed explanations you've been seeking, and the hands-on training the real world demands.

Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.
