Data questions for the MRCPCH part 2 - James L. Robertson

Content of the MRCPCH AKP exam: Paper 2 was considered much more difficult, with long vignettes and a lot of data interpretation. There were two long-form Statistics questions on the exam (there is an example in the RCPCH AKP sample paper) covering real abstracts from the Archive of Childhood Diseases (2009).

The FOP exam is also taken by GPs doing the DCH so will include questions that are more general practice-based. The MRCPCH FOP exam typically consists of 70 SBAs and 10 EMQs, which cover a broad range of topics, including Cardiology, Child Development, Metabolism & Metabolic Medicine, and Neonatology. MRCPCH TAS Exam Content

MRCPCH FOP/TAS Revision - Pastest

Our question setting group meetings are suspended until further notice due to the COVID-19 pandemic, but our important work continues. We're now inviting members with MRCPCH to help us write questions remotely, using your own device at home or work. It's a great opportunity to develop skills and support the next generation of paediatricians.

Exams - write questions for the theory exams | RCPCH

The MRCPCH and the DCH questions are prepared and revised through the hard work of many College members and staff. Our aim is to produce valid, appropriate and well-prepared questions so that our examinations are fair and effective. Our question bank and reputation is threatened by unauthorised copying of exam questions.

Theory exam sample papers | RCPCH

This book is just the same as "Data Questions for the MRCPCH Part 2" book by the same authors. So it will be just a waste of money if you already have the "Data Questions" book. But if you do not have that book, then this is a must buy. For it is the same "Data Questions" book afterall which is indispensible for the preparation for this exam.

Get Through MRCPCH Part 2: Data Interpretation Questions is based on the original title, 100 Data Interpretation Questions in Paediatrics for MRCPCH/MRCP, and provides valuable revision material for candidates sitting the two written papers for Part 2 of the Membership of the Royal College of Paediatrics and Child Health (MRCPCH) exam. This new edition has been revised and expanded and now includes four different question types: best of list; n from many; extended matching questions; and questions to which a written answer must be given. This gives the reader practice in real-life exam style questions as well as more open-ended questions that don't appear in the exam but really test the reader's knowledge while they are revising. It will prepare candidates for questions dealing with data interpretation, including ECGs, EEGs, growth charts, lists of test results and other materials commonly encountered in the examination. The answers are supplemented by invaluable extra information to help the reader understand why an answer is right or wrong, and to aid further revision on the topics covered. All cases have been selected according to the criteria of the MRCPCH exam, comprehensively covering all paediatric topics and coming from years of genuine clinical paediatric experience. This is an essential text for all candidates sitting the MRCPCH exam, as well as examiners and trainers for those exams, senior house officers, specialist registrars and their overseas equivalents.

A revision book aimed at the data interpretation section of the MRCPCH Part 2 exam, consisting of approximately 150 questions, short explanatory answers, helpful hints, and three 'test' exams. The questions are arranged by subject to facilitate revision, and the style and level of difficulty of the questions closely matches the exam.

Here is a collection of multiple-choice questions for the Membership of The Royal College of Paediatrics and Child Health Part 1 examination. There are over 300 questions organised into 10 sections and the mixture of questions attempts to reflect the wide range of topics in the current syllabus. Each question has an explanatory answer, making this book an ideal revision guide for the MRCPCH examination.

This title is directed primarily towards health care professionals outside of the United States. Written for trainee paediatricians preparing for MRCPCH exam, it includes over 250 questions and explanatory answers, in the new exam format, covering data and photographic interpretation and using clinical scenarios. The book is well illustrated with charts and table similar to what candidates will see in the exam, and has a popular feature called 'helpful hints' for each series of questions. over 250 varied types of questions includes 'helpful hints' for candidates updated to match the new exam format for MRCPCH part 2 part of the successful 'Pass Paediatrics' series

The essence of problem-based learning is that a group of eight to 10 students decide for themselves what they need to study after discussing trigger material, such as a written problem. After a few days of self-study, they meet to share, compare, and relate what they have found to the original trigger matter, and to see if they have covered enough ground. Problem-based learning, as currently employed in medical education, originated at McMaster University in Canada, and has been adopted by about one-quarter of all medical schools in the US and about one-half of those in Canada, with Europe and the rest of the world catching up rapidly. Despite the widespread use of problem-based learning in higher education (including medicine, dentistry, health sciences, law, economics and mathematics), there has until now been a serious lack of published practical advice of both students and teachers. This is a 'how to do it' book, intended for students, teachers and those still at school who are trying to decide whether or not to choose a medical school that uses problem-based learning or one that has a more traditional approach to medical education. After a brief introduction, the book explains what problem-based learning is and how it works, and how it fits in with what we know about how adults learn. There are chapters on how to design problems and trigger material, how a tutorial group works, and how self-assessment, peer-assessment and tutor assessment are undertaken. There is practical advice for students, e.g. how to make the transition from a traditional school education to a much more self-directed kind of activity, in which it might be easy to get lost without some practical guidance at the outset. There is practical advice for teachers, who have the job of helping students adapt and cope with the sudden change of no longer being told what to do. The book concludes with chapters on serious pitfalls and a brief discussion of what problem-based learning can be expected to achieve. STEPS IN THE TUTORIAL PROCESS IN PROBLEM-BASED LEARNING Steps 1 to 7: 1. Clarify unfamiliar terms 2. Define the problem(s) 3. Brainstorm possible hypotheses or explanations 4. Arrange explanations into a tentative solution 5. Define learning objectives 6. Gather information and private study 7. Share the results of information gathering and private study Steps 5 to 8 within a clinical medical curriculum: 5. Define learning objectives and requisite clinical experience 6. Gather information and requisite clinical experience 7. Share the results of information gathering and private study 8. Discuss clinical experience

Contains 34 integrated questions with multiple photographs, radiological investigations and several stages of decision-making. Contains specialist adolescent cases and additional cases covering commonly-asked questions.

This companion book to Volume 1 contains chapters on Infectious Diseases, Metabolic Medicine, Neonatology, Neurology, Ophthalmology, Respiratory, Rheumatology and Statistics.

Features 5 practice exams reflecting exam trends, answers with explanations, photographs, ECGs and X-rays to illustrate scenarios and an index.

This book contains 100 data interpretation questions plus their associate explanatory answers for the MRCP/MRCPCH in paediatrics. The questions and answers have been grouped into ten papers of ten questions, to resemble the examination itself. Each practice paper of ten questions contains arepresentative selection of questions from different areas of paediatrics. Also included are figures including ECGs, growth charts and audiometry.This unique book will prove invaluable to all MRCP and MRCPCH candidates for both the clinical and oral exams. The cases are based on real life examples.
