After completing a program design, a programmer converts the design into a series of codes or instructions that the computer can run and execute, making use of a specific programming language and required platforms. After converting the design to code, a programmer runs the code and looks for bugs and errors. If a programmer finds code errors, appropriate corrections are applied, and the program is re-run.

What is a Programmer? - Definition from  
Techopedia

After the design process is complete, it is the job of the programmer to convert that design into a logical series of instructions
