A cytokine is a type of protein released by cells in the body to carry messages to other cells. These messages tell the cells to do something, like to start an immune response. Cytokines get triggered by the presence of an antigen, which is any substance, such as a bacterium or virus, that causes the body to produce antibodies.

Cytokine | Definition of Cytokine at Dictionary.com

cy-to-kin. (s??t?-k?n?) n. Any of various proteins, such as the interleukins and lymphokines, that are released by cells of the immune system and act in intercellular communication, especially in regulating inflammation and the immune response. [cyto- + Greek k?nein, to move; see kinin .]
