p="" This book contains select papers from the International Conference on Geotechnical Engineering Iraq discussing the challenges, opportunities, and problems of application of geotechnical engineering in projects. The contents cover a wide spectrum of themes in geotechnical engineering, including but not limited to sustainability & geotechnical engineering, modeling of foundations & slope stability, seismic analysis & soil mechanics, construction materials, and construction & management of projects. This volume will prove a valuable resource for practicing engineers and researchers in the field of geotechnical engineering, structural engineering, and construction and management of projects. ^

Reliability of Structures enables both students and practising engineers to appreciate how to value and handle reliability as an important dimension of structural design. It discusses the concepts of limit states and limit state functions, and presents methodologies for calculating reliability indices and calibrating partial safety factors. It also

As long as there have been wars, victors have written the prevailing histories of the world's conflicts. An army that loses -- and especially one that is destroyed or disbanded -- is often forgotten. Nevertheless, the experiences of defeated forces can provide important insights, lessons, and perspectives not always apparent to the winning side. In *Wars of Modern Babylon*, Pesach Malovany provides a comprehensive and detailed history of the Iraqi military from its formation in 1921 to its collapse in 2003. Malovany analyzes Iraqi participation in the 1948, 1967, and 1973 Arab wars against Israel as well as Iraq's wars with the Kurds during the twentieth century. His primary focus, however, is the era of Saddam Hussein (1979--2003), who implemented rapid and significant military growth and fought three major wars: against Iran from 1980 to 1988, and against coalition forces led by the United States in 1991 and 2003. He examines the Iraqi military at the strategic, operative, and tactical levels; explains its forces and branches; and investigates its use of both conventional and unconventional weapons. The first study to offer a portrait of an Arab army from its own point of view, *Wars of Modern Babylon* features interviews with and personal accounts from officers at various levels, as well as press accounts covering the politics and conflicts of the period. Malovany also analyzes books written by key figures in the Iraqi government and the army high command. His definitive chronicle offers English speakers new and overlooked perspectives on critical developments in twentieth-century history. The book won the Israel Yitzhak Sade Award for Military Literature in 2010.

Containing the proceedings of the 11th International Conference on Advances in Fluid Mechanics held in Ancona Italy, AFM 2016 followed the success of previous global conferences in the series, the first of which took place in 1996. The success of the conference continues to attract high quality contributions that present original findings and results. The field of fluid mechanics is extensive and has numerous and varied applications. Emphasis within the book is placed on new applications and research currently in progress. A key purpose is to provide a forum for discussing new work in fluid mechanics and, in particular, for promoting the interchange of new ideas and the presentation on the latest applications in the field. The conference covers a wide range of topics such as: Computational methods; Hydrodynamics; Fluid structure interaction; Bio-fluids; Flow in electronic devices; Environmental fluid mechanics; Heat and mass transfer; Industrial applications; Energy systems; Nano and micro fluids; Turbulent flow Jets Fluidics; Droplet and spray dynamics; Bubble dynamics; Multiphase fluid flow; Aerodynamics and gas dynamics; Pumping and fluid transportation and Experimental measurements.

„Mechanics, Models and Methods in Civil Engineering” collects leading papers dealing with actual Civil Engineering problems. The approach is in the line of the Italian-French school and therefore deeply couples mechanics and mathematics creating new predictive theories, enhancing clarity in understanding, and improving effectiveness in applications. The authors of the contributions collected here belong to the Lagrange Laboratory, an European Research Network active since many years. This book will be of a major interest for the reader aware of

modern Civil Engineering.
