in life? Eric Logan did, and he searched for an event that would challenge every fiber of his being and reveal his true character and capability. He found it in Kokoro, a 52 hour extreme fitness event originally designed for Navy SEAL and other special operator candidates. Eric signed up and attacked the event the year he turned 50. Kokoro is the brainchild of Mark Divine, Founder and CEO of Unbeatable Mind and SEALFIT, author of Way of the SEAL and Unbeatable Mind and Commander (Ret), US Navy SEALs. Kokoro is a 52 hour physical, mental and emotional team endurance event modeled after the SEAL's Hell Week. Eric trained at Commander Divine's CrossFit affiliate, US Crossfit, for 5 years before attempting Kokoro. Kokoro participants have historically had a 30% success rate. Kokoro, and the broader SEALFIT program, integrate physical, mental, emotional, intuitional and awareness training to develop elite-level warriors, leaders and teams. Eric is the Chief Operating Officer of COBRA PUMA Golf in Carlsbad, California, and he desired to enter the event and gain as much insight as possible about his capacity as an athlete, a leader, a husband and a father. Eric's teammates at Kokoro 42 (the 42nd iteration of the event) included a 2 time Golden Gloves boxing champion, a 7 time Spartan Race champion, an ultramarathon racer and a professional hockey player, so he had his work cut out for him, attempting to keep up with his teammates and add value to the team.

While he wasn't the fittest athlete that toed the line for the start of Kokoro 42 in April, 2016, he had a clear and strong "Why" for attempting the event and a drive that would keep him from quitting. Come walk beside Eric and learn some of the lessons that he learned during Kokoro 42: - How to face your fears - How to face uncertainty - How your faith can support you and deliver you from life's darkest moments - How to deal with life's roller coaster-managing the inevitable ups and downs without getting too high or low - How to learn your strengths and use them daily for the benefit of you and others - How to learn your weaknesses, how to work around them and hopefully, how to turn them into strengths - How to be helpful in all situations - How to be an encouragement to others - How to find close life partners (Swim Buddies) who challenge and encourage you - How to operate well as a member of a team, with your family, your workmates, your athletic event teammates - Finally, and most importantly, how to learn that your capacity for life, love and work is so much bigger than you ever imagined Ready to go? Hooyah!

the atmosphere, contamination of water resources by spills and discharges of hazardous chemicals, the greenhouse and global warming effects of carbon dioxide generated by consumption of organic fuels, and the depletion of ecosystem stabilizers such as oxygen in lakes and streams overfertilized by human wastes; these are a few of the considerations facing environmental engineers and scientists today. These are complex and confounding processes and phenomena, and their effects vary widely among the virtually limitless number of environmental systems and subsystems on Earth. *Environmental Systems and Processes: Principles, Modeling, and Design* is the first book to explain that, although environmental systems are virtually limitless in number, change is controlled by a relatively small set of fundamental processes. Written by one of the initiators and foremost proponents of the "first principles" approach to environmental system characterization and problem solving, this informative volume details how three fundamental issues lie at the base of every environmental process; i.e., the amount and form of available energy, the rate at which that energy can be exercised, and the configuration and dynamics of the system in which the process occurs. The author demonstrates how the mastering of relatively few fundamental principles can provide the reader with the tools necessary to solve a broad range of environmental problems. Topics discussed in *Environmental Systems and*

Processes: Principles, Modeling, and Design include: fluid flow and mass transport; passive and reactive interphase mass transfer; elementary and complex process rates; ideal, hybrid, and nonideal system modeling and design; and multiphase and interfacial process dynamics and design. The unique and highly effective format of presenting several simple but essential fundamentals first, followed by detailed illustrative examples and explanations of how these principles describe various complex specific environmental systems and processes, makes Environmental Systems and Processes: Principles, Modeling, and Design a requisite for environmental sciences and engineering classrooms, and a staple for the bookshelves of all environmental professionals.

The fourth edition of this work continues to provide a thorough perspective of the subject, communicated through a clear explanation of the concepts and techniques of electric circuits. This edition was developed with keen attention to the learning needs of students. It includes illustrations that have been redesigned for clarity, new problems and new worked examples.
