Henry Pilcher constructed his first pipe organ in Dover, England, in 1820. Over a period of almost 125 years, four generations of family members-working first in England and then in the United States-built Henry Pilcher's Sons Organ Company into a business known for its high manufacturing standards. The institution they created placed organs throughout the United States and only saw its end with the outbreak of World War II. This reference volume, rich with previously undiscovered source material, presents a historical synopsis of the family business. Also included is the opus list of Pilcher organs, arranged both chronologically and by region, and published here for the first time. A vital source for Pilcher organ historians and admirers, this volume offers useful data for anyone seeking historical background or information on specific Pilcher organs.

Includes Part 1A: Books and Part 1B: Pamphlets, Serials and Contributions to Periodicals

This comprehensive reference provides thorough coverage of water and wastewater reclamation and reuse. It begins with an introductory chapter covering the fundamentals, basic principles, and concepts. Next, drinking water and treated wastewater criteria, guidelines, and standards for the United States, Europe and the World Health Organization (WHO) are presented. Chapter 3 provides the physical, chemical, biological, and bacteriological characteristics, as well as the radioactive and rheological properties, of water and wastewater. The next chapter discusses the health aspects and removal treatment processes of microbial, chemical, and radiological constituents found in reclaimed wastewater. Chapter 5 discusses the various wastewater treatment processes and sludge treatment and disposal. Risk assessment is covered in chapter 6. The next three chapters cover the economics, monitoring (sampling and analysis), and legal aspects of wastewater reclamation and reuse. This practical handbook also presents real-world case studies, as well as sources of information for research, potential sources for research funds, and information on current research projects.

Each chapter includes an introduction, end-of-chapter problems, and references, making this comprehensive text/reference useful to both students and professionals.

A thought-provoking investigation of an urgent issue facing American communities today, Edward C. Lorenz's book examines the intersection of corporate irresponsibility and civic engagement. At the heart of this case study is a group of firms responsible for seven of the most contaminated Superfund sites in the United States, the largest food contamination accident in U.S. history, stunning stock and financial manipulations, and a massive shift of jobs off shore. In the face of these egregious environmental, employee, and investor abuses, several communities impacted by these firms organized to confront and combat failures in corporate and bureaucratic leadership, winning notable victories over major financiers, lobbyists, and indifferent or ineffective government agencies. A critical analysis of public and private leadership, business and economic ethics, and civic life, this book concludes with a stirring blueprint for other communities facing similarly overwhelming opposition.

Showing ownership of securities by savings banks, trust companies, insurance companies, and other institutions. Compiled from state and other documents published in the United States and Canada.
