• To order Ha! The Science of When We Laugh and Why for £17.99 with free UK p&p, and Humour: A Very Short Introduction for £6.39 with free UK p&p, call Guardian book service on 0330 333 6846 ...

Ha! The Science of When We Laugh and Why by Scott Weems ...

Two recent books for general audiences provide very different progress reports from the frontiers of humor science. The first, Ha: The Science of When We Laugh and Why, by Scott Weems, a cognitive neuroscientist and postdoctoral research associate at the University of Maryland, takes us on a lighthearted tour of things funny. Mindful of the cliché that analysis kills humor, Weems starts with an amusing anecdote about groundbreaking comedian Lenny Bruce and maintains a high humor quotient ...

Funny Science: Review: Ha! The Science of When We Laugh ...

Scott Weems is a research scientist at the University of Maryland and author of Ha! The Science of When We Laugh and Why (Basic Books, 2014) in Little Rock, Arkansas.

'Ha! The Science of When We Laugh and Why' Excerpt

In this fascinating investigation into the science of humor and laughter, cognitive neuroscientist Scott Weems uncovers what's happening in our heads when we giggle, guffaw, or double over with laughter. While we typically think of humor in terms of jokes or comic timing, in Ha! Weems proposes a provocative new model.

In this fascinating investigation into the science of humor and laughter, cognitive neuroscientist Scott Weems uncovers what's happening in our heads when we giggle, guffaw, or double over with laughter. While we typically think of humor in terms of jokes or comic timing, in Ha! Weems proposes a provocative new model.

Ha!: The Science of When We Laugh and Why - Kindle edition ...

Humor, like pornography, is famously difficult to define. We know it when we see it, but is there a way to figure out what we really find funnyand why? In this fascinating investigation into the science of humor and laughter, cognitive neuroscientist Scott Weems uncovers what's happening in our head...

Ha!: The Science of When We Laugh and Why (Unabridged) on ...

The Science of When We Laugh and Why, by cognitive neuroscientist Scott Weems. Weems explains what humor is, how things become funny, and why evolution gave us laughter. According to Weems, laughter and humor help us process conflict in our environment through the dopamine that is released in our brains when we find something funny.

Why Do We Laugh? | Greater Good

Trump lied about science | Science

Science allows us to use reasoning and to think critically. We are all experts in different fields: for example, one might question, research, hypothesise, experiment and analyse the best way to clean the house every day. I think that we don't need to read research literature to be scientists. By observing and learning about things that we find ...

What's the science behind a smile? | British Council

Hyaluronan (HA) is a naturally occurring high-molecular-mass glycosaminoglycan found in connective, epithelial and neural tissue. Noted for its viscous and elastic properties, hyaluronan acts in joint spaces as both a lubricant and a shock absorber.

An entertaining tour of the science of humor and laughter Humor, like pornography, is famously difficult to define. We know it when we see it, but is there any way to figure out what we really find funny? In this fascinating investigation into the science of humor and laughter, neuroscientist Scott Weems uncovers what's happening in our heads when we giggle, guffaw, or double over with laughter. Beginning with the premise that humor arises from inner conflict in the brain, Weems explores such issues as why surprise is so important for humor, why computers are terrible at recognizing what's funny, and why cringe-worthy stereotypes make us laugh the hardest. From the role of insult jokes to the benefit of laughing for our immune system responses, Ha! reveals why humor is so idiosyncratic, and why how-to books alone will never help us become funnier people. Packed with the latest research, amusing anecdotes (and even a few jokes), Ha! is a delightful tour of why humor is so important to our daily lives.

This book discusses the ways in which science, the touchstone of reliable knowledge in modern society, changed dramatically in the second half of the 20th century, becoming less trustworthy through conflicts of interest and excessive competitiveness. Fraud became common enough that organized efforts to combat it now include a federal Office of Research Integrity. Competent minority opinions are sometimes thereby suppressed, with the result that policy makers, the media and the public are presented with biased or incomplete information. Evidence tending to challenge established theories is sometimes rejected without addressing its substance. While most would agree in the abstract that science can go wrong, few would consider—despite interesting contrary evidence—that official consensus about the origins of the universe or the causes of global warming might be mistaken.

The instant New York Times Bestseller #1 Wall Street Journal Business Bestseller Instant Washington Post Bestseller "Brims with a surprising amount of insight and practical advice." --The Wall Street Journal Daniel H. Pink, the #1 bestselling author of Drive and To Sell Is Human, unlocks the scientific secrets to good timing to help you flourish at work, at school, and at home. Everyone knows that timing is everything. But we don't know much about timing itself. Our lives are a never-ending stream of "when" decisions: when to start a business, schedule a class, get serious about a person. Yet we make those decisions based on intuition and guesswork. Timing, it's often assumed, is an art. In When: The Scientific Secrets of Perfect Timing, Pink shows that timing is really a science. Drawing on a rich trove of research from psychology, biology, and economics, Pink reveals how best to live, work, and succeed. How can we use the hidden patterns of the day to build the ideal schedule? Why do certain breaks dramatically improve student test scores? How can we turn a stumbling beginning into a fresh start? Why should we avoid going to the hospital in the afternoon? Why is singing in time with other people as good for you as exercise? And what is the ideal time to quit a job, switch careers, or get married? In When, Pink distills cutting-edge research and data on timing and synthesizes them into a fascinating, readable narrative packed with irresistible stories and practical takeaways that give readers compelling insights into how we can live richer, more engaged lives.

Part road-trip comedy and part social science experiment, a scientist and a journalist travel the globe to discover the secret behind what makes things funny, questioning countless experts, including Louis C.K., along the way.

INTERNATIONAL BESTSELLER A Best Science Book of 2021—Financial Times "Exhilarating... a vast-ranging, phenomenal achievement that will undoubtedly become a seminal text." —The Guardian "A brilliant beast of a book."—David Byrne Anil Seth's quest to understand the biological basis of conscious experience is one of the most exciting contributions to twenty-first-century science. What does it mean to "be you"—that is, to have a specific, conscious experience of the world around you and yourself within it? There may be no more elusive or fascinating question. Historically, humanity has considered the nature of consciousness to be a primarily spiritual or philosophical inquiry, but scientific research is now mapping out compelling biological theories and explanations for consciousness and selfhood. Now, internationally renowned neuroscience professor, researcher, and author Anil Seth is offers a window into our consciousness in BEING YOU: A New Science of Consciousness. Anil Seth is both a leading expert on the neuroscience of consciousness and one of most prominent spokespeople for this relatively new field of science. His radical argument is that we do not perceive the world as it objectively is, but rather that we are prediction machines, constantly inventing our world and correcting our mistakes by the microsecond, and that we can now observe the biological mechanisms in the brain that accomplish this process of consciousness. Seth has been interviewed for documentaries aired on the BBC, Netflix, and Amazon and podcasts by Sam Harris, Russell Brand, and Chris Anderson, and his 2017 TED Talk on the topic has been viewed over 11 million times, a testament to his uncanny ability to make unimaginably complex science accessible and entertaining.

Ask a scientist about Hollywood, and you'll probably get eye rolls. But ask someone in Hollywood about science, and they'll see dollar signs: moviemakers know that science can be the source of great stories, with all the drama and action that blockbusters require. That's a huge mistake, says Randy Olson: Hollywood has a lot to teach scientists about how to tell a story—and, ultimately, how to do science better. With Houston, We Have a Narrative, he lays out a stunningly simple method for turning the dull into the dramatic. Drawing on his unique background, which saw him leave his job as a working scientist to launch a career as a filmmaker, Olson first diagnoses the problem: When scientists tell us about their work, they pile one moment and one detail atop another moment and another detail—a stultifying procession of "and, and, and." What we need instead is an understanding of the basic elements of story, the narrative structures that our brains are all but hardwired to look for—which Olson boils down, brilliantly, to "And, But, Therefore," or ABT. At a stroke, the ABT approach introduces momentum ("And"), conflict ("But"), and resolution ("Therefore")—the fundamental building blocks of story. As Olson has shown by leading countless workshops worldwide, when scientists' eyes are opened to ABT, the effect is staggering: suddenly, they're not just talking about their work—they're telling stories about it. And audiences are captivated. Written with an uncommon verve and enthusiasm, and built on principles that are applicable to fields far beyond science, Houston, We Have a Narrative has the power to transform the way science is understood and appreciated, and ultimately how it's done.

* pick a project you'll enjoy * create a great experiment * organize your data * design a winning backboard * and more! Your all-in-one resource for science fair success Gearing up for your first science fair project? Looking for the perfect science fair survival guide? Well, now your search is over. So You Have to Do a Science Fair Project, written by an experienced science fair judge and an international science fair winner, walks you through the science fair process, one step at a time. Filled with lots of solid, practical advice and troubleshooting tips, this easy-to-use handbook covers: * The basics of the scientific method * How to find a good topic * How to do thorough research * How to create a successful experiment * How to organize your data * And much more! There are also lots of helpful suggestions for polishing your final presentation, including putting the finishing touches on your display, dressing to impress on science fair day, and knowing how to talk with the judges. Whether you're a first-time participant or a science student looking to excel, you'll find yourself turning to this invaluable resource again and again for years to come.

World-leading experts tackle challenging issues of science and faith. Here are 20 papers from the Faraday Institute for Science and Religion, which is a UK educational charity, and a member of the Cambridge Theological Federation which is an affiliate of Cambridge University. In addition to academic research, the Institute engages in the public understanding of science and religion by means of courses, conferences, lectures, seminars and the media. The Faraday Papers provide the general reader with accessible and readable introductions to the relationship between science and religion, written by a broad range of authors who are expert in the field. They are intended to be read by those without a scientific background. Here they are collected for the first time into a single volume. Contributors include: Has Science Killed God? - Prof. Alister McGrath FRSA The Science and Religion Debate, an Introduction - Revd Dr John Polkinghorne KBE FRS Why Care for the Environment? - Prof. Sir John Houghton FRS Ethical Issues in Genetic Modification - Prof. John Bryant The Age of the Earth - Prof. Bob White FRS Creation and Evolution not Creation or Evolution - Prof. R.J. Berry FRSE

Religion tells us that God is love but neuroscience counters with love as a well-timed trickle of transmitters and hormones. With doctorates in both mathematics and theology, Kevin Sharpe explores these notions and asks the question Has Science Displaced the Soul?
