Heart failure is a condition that often results in chronic tiredness and shortness of breath. It also requires complex nursing and medical treatment, especially after a hospital admission, which is all too frequent for persons with heart failure. This book describes and discusses the latest research concerning the benefits of having specially trained nurses manage the care of patients with heart failure after they have been discharged from hospital to their own home. Leading nurses and doctors from around the world discuss their experiences with this type of innovative and effective care program. Building upon these experiences, the book also contains a practical guide to developing this type of care program into a fully functional service that provides quality care to those patients admitted to hospital with heart failure.

Although the majority of heart failure represents the exacerbation of chronic disease, about 20% will present as a first time diagnosis. And although there are a number of intravenous agents that can be used for acute decompensated heart failure, there are no national guidelines currently available. Edited by a well-known expert and his team of con
