Iron Age Communities in Britain: An Account of England, Scotland and Wales from the Seventh Century BC Until the Roman Conquest Barry W. Cunliffe Taylor & Francis

Since its first publication in 1971, Barry Cunliffe's monumental survey has established itself as a classic of British archaeology. This fully revised fourth edition maintains the qualities of the earlier editions, whilst taking into account the significant developments that have moulded the discipline in recent years. Barry Cunliffe here incorporates new theoretical approaches, technological advances and a range of new sites and finds, ensuring that *Iron Age Communities in Britain* remains the definitive guide to the subject.

The *Iron Age in Northern Britain* examines the archaeological evidence for earlier Iron Age communities from the southern Pennines to the Northern and Western Isles and the impact of Roman expansion on local populations, through to the emergence of historically recorded communities in the post-Roman period. The text has been comprehensively revised and expanded to include new discoveries and to take account of advanced techniques, with many new and updated illustrations. The volume presents a comprehensive picture of the 'long Iron Age', allowing readers to appreciate how perceptions of Iron Age societies have changed significantly in recent years. New material in this second edition also addresses the key issues of social reconstruction, gender, and identity, as well as assessing the impact of developer-funded archaeology on the discipline. Drawing on recent excavation and research and interpreting evidence from key studies across Scotland and northern England, *The Iron Age in Northern Britain* continues to be an accessible and authoritative study of later prehistory in the region.

The first millennium BC was a time of dramatic change in Europe, dominated by the emergence of Rome as a mega-state. Britain, on the periphery of these developments, witnessed huge social and economic change, seeing the end of the Bronze Age cycle of subsistence farming and the beginning of a more complex society which was to alter very little until the oceans were conquered in the 16th century. This book is a detailed study of these developments.

A collection of essays by many of the leading specialists in the archaeology of the Iron Age and early Roman periods in Britain and western Europe, paying tribute to Professor Sir Barry Cunliffe. The subjects covered range over more than a thousand years, and from the Atlantic coasts to the eastern Mediterranean.

Widely regarded as major visible field monuments of the Iron Age, hillforts are central to an understanding of later prehistoric communities in Britain and Europe. Harding reviews the changing perceptions of hillforts and the future prospects for hillfort research, highlighting aspects of contemporary investigation and interpretation.

Seeks to establish what we now know (and do not know) about Earlier Iron Age communities in Britain and their neighbours on the Continent. The authors look at how communities of the Late Bronze Age transform into those of the Earlier Iron Age, and how we understand the social changes of the later first millennium BC.

Alternative Iron Ages examines Iron Age social formations that sit outside traditional paradigms, developing methods for archaeological characterisation of alternative models of society. In so doing it contributes to the debates concerning the construction and resistance of inequality taking place in archaeology, anthropology and sociology. In recent years, Iron Age research on Western Europe has moved towards new forms of understanding social structures. Yet these alternative social organisations continue to be considered as basic human social formations, which frequently imply marginality and primitivism. In this context, the grand narrative of the European Iron Age continues to be defined by cultural foci, which hide the great regional variety in an artificially homogenous area. This book challenges the traditional classical evolutionist narratives by exploring concepts such as non-triangular societies, heterarchy and segmentarity across regional case studies to test and propose alternative social models for Iron Age social formations. Constructing new social theory both archaeologically based and supported by sociological and anthropological theory, the book is perfect for those looking to examine and understand life in the European Iron Age. Cunobelin, Shakespeare's *Cymbeline*, ruled much of south-east Britain in the years before Claudius' legions arrived, creating the Roman province of Britannia. But what do we know of him and his rule, and that of competing dynasties in south-east Britain? This book examines the background to these, the first individuals in British history. It explores the way in which rulers bolstered their power through the use of imagery on coins, myths, language and material culture. After the visit of Caesar in 55 and 54 BC, the shadow of Rome played a fundamental role in this process. Combining the archaeological, literary and numismatic evidence, John Creighton paints a vivid picture of how people in late Iron Age Britain reacted to the changing world around them.
