The Knowledge Assessment Methodology (KAM) database measures variables that may be used to assess the readiness of countries for the knowledge economy and has many policy uses. Formal analysis using KAM data is faced with the problem of which variables to choose and why. Rather than make these decisions in an ad hoc manner, the authors recommend factor-analytic methods to distill the information contained in the many KAM variables into a smaller set of factors. Their main objective is to quantify the factors for each country, and to do so in a way that allows comparisons of the factor scores over time. The authors investigate both principal components as well as true factor analytic methods, and emphasize simple structures that help provide a clear political-economic meaning of the factors, but also allow comparisons over time.

Nigeria has a bold national vision of becoming one of the world's top 20 economies by 2020. However, despite being the 8th most populous country in the world, it ranks 41st in terms of GDP and 161st in terms of GDP per capita. Nigeria has long depended on oil for its exports and government revenues. This dependence has led to rent seeking and a reluctance to examine potential avenues for economic diversification. The authors of 'Knowledge, Productivity, and Innovation in Nigeria' believe that the goal of becoming a top-twenty economy can only be achieved if Nigeria makes the transition to a new economy rooted in the 21st century that harnesses the power of knowledge and avoids a static oil-based growth strategy. Knowledge has always been central to development, but new technologies have made it globally accessible. Countries such as the Republic of South Korea, India, and the United States that

have exploited new technologies and know-how have pushed their innovation and productivity frontiers. Countries that have failed to do so risk remaining mired in poverty. In order to achieve Vision 2020, Nigeria must move beyond the stop-start patterns of oil-based development that have characterized it since independence. It must create a stable and prosperous economy based on a critical mass of knowledge workers. Knowledge, Productivity, and Innovation in Nigeria examines how Nigeria can prepare for this century and where its leaders can focus to achieve their vision, presenting the experiences of other countries from which Nigeria can learn.

The Knowledge Assessment Methodology (KAM) database measures variables that may be used to assess the readiness of countries for the knowledge economy and has many policy uses. Formal analysis using KAM data is faced with the problem of which variables to choose and why. Rather than make these decisions in an ad hoc manner, the authors recommend factor-analytic methods to distill the information contained in the many KAM variables into a smaller set of "factors." Their main objective is to quantify the factors for each country, and to do so in a way that allows comparisons of the factor scores over time. The authors investigate both principal components as well as true factor analytic methods, and emphasize simple structures that help provide a clear political-economic meaning of the factors, but also allow comparisons over time.

The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

"In the global knowledge economy of the twenty-first century, India's development policy challenges will require it to use knowledge more effectively to raise the productivity of agriculture, industry, and services and reduce poverty. India has made tremendous strides in its economic and social development in the past two decades. Its impressive growth in recent years—8.2 percent in 2003—can be attributed to the far-reaching reforms embarked on in 1991 and to opening the economy to global competition. In addition, India can count on a number of strengths as it strives to transform itself into a knowledge-based economy—availability of skilled human capital, a democratic system, widespread use of English, macroeconomic stability, a dynamic private sector, institutions of a free market economy; a local market that is one of the largest in the world; a well-developed financial sector; and a broad and diversified science and technology infrastructure, and global niches in IT. But India can do more—much more—to leverage its strengths and grasp today's opportunities. India and the Knowledge Economy assesses India's progress in becoming a knowledge economy and suggests actions to strengthen the economic and institutional regime, develop educated and skilled workers, create an efficient innovation system, and build a dynamic information infrastructure. It highlights that to get the greatest benefits from the knowledge revolution, India will need to press on with the economic reform agenda that it put into motion a decade ago and continue to implement the various policy and institutional changes needed to accelerate growth. In so doing, it will be able to improve its international competitiveness and join the ranks of countries that are making a successful transition to the knowledge economy."

Knowledge and its application are now widely recognized to be key sources of growth in the global economy. Putting knowledge to work allows countries to improve everyday life for their people, opening up new possibilities for small and medium-size enterprises and other less-developed economic groups. This volume examines the challenges and opportunities for Mexico's knowledge-based economy, offering strategies for making major improvements in the country's capacity to generate knowledge and transform it into wealth.

In the crowded field of climate change reports, 'WDR 2010' uniquely: emphasizes development; takes an integrated look at adaptation and mitigation; highlights opportunities in the changing competitive landscape; and proposes policy solutions grounded in analytic work and in the context of the political economy of reform.

The COVID-19 pandemic struck the global economy after a decade that featured a broad-based slowdown in productivity growth. Global Productivity: Trends, Drivers, and Policies presents the first comprehensive

analysis of the evolution and drivers of productivity growth, examines the effects of COVID-19 on productivity, and discusses a wide range of policies needed to rekindle productivity growth. The book also provides a far-reaching data set of multiple measures of productivity for up to 164 advanced economies and emerging market and developing economies, and it introduces a new sectoral database of productivity. The World Bank has created an extraordinary book on productivity, covering a large group of countries and using a wide variety of data sources. There is an emphasis on emerging and developing economies, whereas the prior literature has concentrated on developed economies. The book seeks to understand growth patterns and quantify the role of (among other things) the reallocation of factors, technological change, and the impact of natural disasters, including the COVID-19 pandemic. This book is must-reading for specialists in emerging economies but also provides deep insights for anyone interested in economic growth and productivity. Martin Neil Baily Senior Fellow, The Brookings Institution Former Chair, U.S. President's Council of Economic Advisers This is an important book at a critical time. As the book notes, global productivity growth had already been slowing prior to the COVID-19 pandemic and collapses with the pandemic. If we want an effective recovery, we have to understand what was driving these long-run trends. The book presents a novel global approach to examining the levels, growth rates, and drivers of productivity growth. For anyone wanting to understand or influence productivity growth, this is an essential read. Nicholas Bloom William D. Eberle Professor of Economics, Stanford University The COVID-19 pandemic hit a global economy that was already struggling with an adverse pre-existing condition—slow productivity growth. This extraordinarily valuable and timely book brings considerable new evidence that shows the broad-based, long-standing nature of the slowdown. It is comprehensive, with an exceptional focus on emerging market and developing economies. Importantly, it shows how severe disasters (of which COVID-19 is just the latest) typically harm productivity. There are no silver bullets, but the book suggests sensible strategies to improve growth prospects. John Fernald Schrodgers Chaired Professor of European Competitiveness and Reform and Professor of Economics, INSEAD

Over recent decades we have witnessed the globalization of research. However, this has yet to translate into a worldwide scientific network, across which competencies and resources can flow freely. Arab countries have strived to join this globalized world and become a 'knowledge economy,' yet little time has been invested in the region's fragmented scientific institutions; institutions that should provide opportunities for individuals to step out on the global stage. Knowledge Production in the Arab World investigates research practices in the Arab world, using multiple case studies from the region with particular focus on Lebanon and Jordan. It depicts the Janus-like face of Arab research, poised between the negative and the positive and faced with two potentially opposing strands; local relevance alongside its internationalization. The book critically assesses the role and dynamics of research and poses

questions that are crucial to further our understanding of the very particular case of knowledge production in the Arab region. The book explores research's relevance and whom it serves, as well as the methodological flaws behind academic rankings and the meaning and application of key concepts such as knowledge society/economy. Providing a detailed and comprehensive examination of knowledge production in the Arab world, this book is of interest to students, scholars and policy makers working on the issues of research practices and status of science in contemporary developing countries.
