A non-monotonic logic
is a formal logic
whose consequence
relation is not
monotonic. In other
words, non-monotonic

Page 35/45

Lecture Notes

Bookmark File

PDF Logic

Logics are devised to capture and represent defeasible inferences, i.e., a kind of inference in which reasoners draw tentative conclusions, enabling reasoners to retract their conclusion based on further evidence. Most studied formal logics have a monotonic consequence relation,
