Results from experiments conducted during the 1970s indicated that tolerance can develop to many of the effects of cannabis and  $\Delta^9$  THC, that this is induced more readily and rapidly to some effects than to others and that it is essentially pharmacodynamic in nature and does not depend to any significant extent on changes in cannabinoid disposition or metabolism (reviewed in Pertwee, 1991; Sim Selley, 2003; Tanda & Goldberg, 2003).

marijuana chemistry pharmacology  
Cannabis is one of the most widely abused substances throughout the world. The primary psychoactive constituent of cannabis, delta 9-tetrahydrocannabinol ( (9\_)THC), produces a myriad of pharmacological effects in animals and humans. Although it is used as a recreational drug, it can potentially lead to dependence and behavioral disturbances and its heavy use may increase the risk for psychotic disorders. Many studies that endeavor to understand the mechanism of action of cannabis concentrate ...
