A synthesis of research and theory, this work chronicles the dawn of a new era in which the adaptability and autonomy of living organisms becomes the model for human made systems and machines. The author combines ideas from the Chaos Theory, cybernetics, current thinking on evolution and research into computerized artificial life with his own experience of on-line culture to show that industrial culture is now obsolete. This book presents the prospects of imminent revolution as Kelly identifies new frontiers of thinking about biological systems that will change the way the natural world is perceived.

In 1998 the author, a professional prankster, trademarked the phrase "freedom of expression" to show how the expression of ideas was being restricted. Now he uses intellectual property law as the focal point to show how economic concerns are seriously eroding creativity and free speech.
