Microwaves are a form of electromagnetic radiation with wavelengths ranging from about one meter to one millimeter; with frequencies between 300 MHz (1 m) and 300 GHz (1 mm). Different sources define different frequency ranges as microwaves; the above broad definition includes both UHF and EHF (millimeter wave) bands.A more common definition in radio-frequency engineering is the range between ...

Designing and fabricating a printed circuit board (PCB) at millimeter-wave frequencies starts with the circuit material, although the choice of transmission-line technology can play quite a part in how much performance can be delivered at those high frequencies. With the ongoing consumption of RF/microwave frequencies for so many cellular and wireless communications, interest continues to grow in millimeter-wave frequencies for many short range, lower power systems, such as automotive radars ...
