Formerly, middle offices supported the front-to-back process flow with individual, manual steps. The expectation of middle offices today, however, is that they standardize and automate these steps or even make them redundant. This can only be achieved by managing the individual process rather than by patching up its deficiencies case by case. Product and customer segment management is becoming ...

Risk is by far the best "middle office" role and my current employer treats it, from a pay and visibility perspective, more like front office. I think you'll see that in a lot of places - risk is sort of in-between FO and MO. I wouldn't ever lump it with trade settlement or fund accounting. Since its launch in 2001, Gas Trading Manual (GTM) has established itself as the leading information source on the international gas market. Compiled from the contributions of some of the most senior and widely respected figures in the trade, this edition provides detailed and accurate analysis on all aspects of this complex business from the geography of gas through to the markets, trading instruments, contracts, gas pricing, accounting and taxation. This edition further enhances its reputation as the indispensable practical companion for all those involved in the trading of gas.

This manual is for New Entrants into the Banking and other Financial Services Industry. Those who did not have the privilege to undergo a comprehensive entry-level training before they started their banking career will also find the manual useful. Branch Managers and Departmental Heads or Group Heads can use the manual as resource materials to train new officers that are assigned to them. The manual contains the banking principles that new entrants from different backgrounds – finance, economics, engineering, law or history need to understand before they can be comfortable and proficient on banking jobs. It has been written in a simple, concise, practical and lucid style to make it readable and to enhance understanding.

Andrew DeJoy's Behind the Swap offers a middle office perspective on the risks and miscommunications in post-trade processing and provides a framework and solutions for a better approach. In August of 2020, Citibank made one of the worst mistakes in banking history: it accidentally sent out almost \$900 million of its own funds. Many of the recipients didn't give back the money. Citibank sued. And a federal court ruled that the recipients could keep the funds. Citibank's error is not surprising. The underlying contributors that led to the mistaken payment permeate the global financial services industry. Manual data entry, decades old technological infrastructure, inadequate training, and systems that can't interact with one another are just a few of the

problems that face post-trade processing—the machinery behind financial markets. Unfortunately, years of neglect by regulators and financial institutions themselves has left this infrastructure needlessly complex, astoundingly inefficient, frequently inaccurate, and woefully inadequate for modern financial markets. The problems are easy to see but difficult to admit. For financial institutions, the current system costs billions of dollars each year in labor, systems maintenance, and lost funds. For regulators, the current system precludes the ability to track systemic risk. It also artificially inflates the stability of the global financial system. For lawyers and prosecutors, the current system allows ample opportunity for unlawful misconduct such as rogue trading and fraud. Andrew DeJoy's *Behind the Swap* examines the risks involved in post-trade processing in swaps and derivative markets and provides solutions to better control those risks. While Andrew doesn't claim to have all the answers, he does believe there is a better system that is both achievable and necessary.

The legendary Greek figure Orpheus was said to have possessed magical powers capable of moving all living and inanimate things through the sound of his lyre and voice. Over time, the Orphic theme has come to indicate the power of music to unsettle, subvert, and ultimately bring down oppressive realities in order to liberate the soul and expand human life without limits. The liberating effect of music has been a particularly important theme in twentieth-century African American literature. The nine original essays in *Black Orpheus* examines the Orphic theme in the fiction of such African American writers as Jean Toomer, Langston Hughes, Claude McKay, James Baldwin, Nathaniel Mackey, Sherley Anne Williams, Ann Petry, Ntozake Shange, Alice Walker, Gayl Jones, and Toni Morrison. The authors discussed in this volume depict music as a mystical, shamanistic, and spiritual power that can miraculously transform the realities of the soul and of the world. Here, the musician uses his or her music as a weapon to shield and protect his or her spirituality. Written by scholars of English, music, women's studies, American studies, cultural theory, and black and Africana studies, the essays in this interdisciplinary collection ultimately explore the thematic, linguistic structural presence of music in twentieth-century African American fiction.

The 1st edition of *Back Office and Beyond* became the benchmark source and reference for 'best practice' in back office procedures. Better attention to back office procedures would have prevented disasters at Barings, Sumitomo, and other causes celebres - not to mention the latest debacle at Allfirst in the USA. This ground breaking book is an essential read for anyone wanting his/her organisation to thrive and survive, containing particularly practical guidance and advice and now extends its cover to the implications of CAD II. There is a compelling requirement for aspects of risk to be situated in the Back/Middle Office areas. Indeed, they should be involved at first base: for if data is not captured accurately, there is little chance of the institution's risk profile being accurate. With so many banks offering similar products and pricing, accurate and speedy settlements have become a competition issue not to be ignored. As an additional reason for purchase, this edition now offers a guide to Equities' settlement also.

Although there are a number of publications covering records management generically, very few are focused on the specific challenges of particular sectors, and fewer still on current regulatory, legal and governance issues associated with managing records in global banking and finance businesses. This timely book fills this gap by exploring these complex issues fully, and offers strategies and examples of best practice to meet the recordkeeping challenges to which they give rise in corporate and commercial banking enterprises operating in global capital markets. The examples and cases studies encompass recordkeeping in investment banking, asset management, brokerage and other financial services which serve global markets, and the book will be of particular significance to the financial sector. However, covering as it does the issues that arise from operating across borders and jurisdictions, it will also be of relevance to multi-national businesses in other sectors. The key chapters cover: setting the scene: background and concepts regulatory and legal compliance common trends in financial services: balancing risk and return litigation-related issues recordkeeping approaches. Whilst the expert team of

authors are careful to ensure that the book reflects recognized records management principles, the accessible language used will assure its value to information professionals and others without a formal records management background. Readership: This much-needed textbook will be essential reading for records managers, archivists and information professionals who manage records in the financial sector. It will also be invaluable for individuals engaged in a wide range of disciplines who rely on records to meet the increasing number of legal and regulatory obligations to which institutions engaged in global banking and finance are now subject. These include: compliance professionals, data protection officers, governance professionals, regulators and risk managers, senior managers and directors, chief operating officers and IT specialists.
