*Pathology*

Circumscribed carcinoma of the uterine cervix was described in 1977 by Hasumi and associates.

118 In their study, the tumors were

Download File

Characterized by  
solid cords of  
cells with  
neither squamous  
nor glandular  
differentiation,  
surrounded by a  
dense  
lymphocytic  
infiltrate,  
which  
occasionally  
contained a  
considerable

number of  
eosinophils and  
plasma cells.

The tumor cells  
were fairly  
monomorphic,  
with large  
nuclei, one or  
more nucleoli,  
and clear to  
eosinophilic,  
granular  
cytoplasm.
