According to Colman (1988), Harold Pinter's play *The Caretaker* illustrates the inadequacy of the stable set, a solution concept of cooperative game theory proposed by von Neumann and Morgenstern (1944). We challenge this illustration by pointing out that it is at variance with Pinter scholars' interpretation of the play.

The complement of a finite set in \mathbb{R} is open. If A is the union of the infinite sequence $x_n = 1/n$, $n = 1, 2, \dots$, together with its limit 0 then the complement $\mathbb{R} - A$ is open. Any union of open intervals is an open set. The preceding examples are special cases of this. The converse statement is also true: every open set O is a union
