Working practices between the UK and Welsh Assembly governments in relation to cross-border policies appear much improved since the Committee's earlier reports on this subject. But a number of outstanding issues remain in transport, health and further and higher education. On transport the Committee welcomes the planned electrification of the Great Western Main Line. However, the Department for Transport appears to have washed its hands of any strategic responsibility for cross-border roads. The A483 is the clearest example of a road vital for travel within Wales but which is not important to the English region in which it is located, and as a result loses out on funding. The Committee stresses the need for comparative data on which to build solid research comparing NHS performance in the devolved nations. More needs to be done to raise public awareness of the differences in services people can expect to receive on both sides of the border. Transparency of information is vital. Research proposals in the UK Government's Higher Ambitions strategy for higher education make no reference to nations other than England, despite the UK-wide research remit of the Department for Business, Innovation and Skills. The Committee calls for details about how research funding proposals apply to all four nations.

"The book not only gives a clear picture of the policy andstrategic framework of PFI/PPP projects, the governance andknowledge management issues through different phases from planning,design development to operation and service delivery and theprocesses associated with each phase, but practical tools,methodologies and capabilities needed to deliver PFI/PPP projectsin a range of sectors are also explained. It clearly demonstratesthe key imperatives that are the hallmark of successful programmesand projects no matter what there method of funding or delivery. I have no doubt that, in undertaking the programmes and projectsthat I am responsible for delivering and in undertaking OGC GatewayReviews, to support clients delivering their own programmes andprojects, I will draw on the material contained in thisbook." —From the Foreword by Rob Smith, Director of GatewayReviews and Estates & Facilities, Department of Health There is a growing demand worldwide for transport, healthcare,education, energy and water infrastructure. However, governmentresources are often insufficient to meet the needs of new projectsand to upgrade existing infrastructure. Private participation inpublic infrastructure is therefore increasing but the respective roles of the public and private sectors are the subject of intense debate. This has led to renewed interest in public-privatepartnerships in developed and developing countries. Governance and Knowledge Management for Public-PrivatePartnerships shows how effective governance and knowledge management can improve the performance of PFI/PPP projects. It provides an in-depth understanding of different dimensions ofgovernance and how they affect project management structure,processes, and decision-making ability of actors and teams involvedin PFI/PPP projects. The role of knowledge management strategy, theneed for benchmarking knowledge management efforts, specific toolsand methodologies for capturing, sharing and applying knowledge toaccelerate learning and capacity building are also examined. The book is essential reading for all those involved in PFI/PPPprojects, including policy makers, industry practitioners,academics and students. The practical tools for governance andknowledge management it offers make this book particularly usefulfor consultants, contractors and client organisations.

Planning is central to economic, social and environmental life but its practice is frequently criticised by all who engage in it. Seen as too restrictive by those who promote development and too weak by those opposing it, planners who advise on proposals cannot sit on the fence. Is it the planning system that is problematic or is it the planners who work within it? This valuable book examines these issues at the continuing professional development level and discusses the ways in which management theories, tools and techniques can be applied to planning practice and used by all who engage in it. Written by an experienced author and widely respected academic, the book includes case studies and question and answer sections, and will be valuable through both initial and continuous professional education, helping candidates prepare for examinations and subsequent management.

Take These Six Steps to Reach Your Project Management and Leadership Goals! Starting with an insightful self-assessment, The Project Management Coaching Workbook: Six Steps to Unleashing Your Potential offers tools, questions, reviews, guiding practices, and exercises that will help you build your roadmap to project management and leadership success. Based on her experience as a coach and mentor, Susanne Madsen offers a proven six-step method designed to help you understand and articulate what you want to achieve—and then assist you in achieving those goals. This workbook will help project managers at any level overcome some of the most common challenges they face by:

- Effectively managing a demanding workload
- Leading and motivating a team
- Building effective relationships with senior stakeholders
- Managing risks, issues, and changes to scope
- Delegating effectively

Decades of research have demonstrated that the parent-child dyad and the environment of the familyâ€"which includes all primary caregiversâ€"are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Project Management has been significantly revised to include important new developments in the field. The previous editions of this best-selling book from Rory Burke have been widely used on university degree programmes, executive management training courses, planning software courses and professional certification. Features: Reflects changes in the new versions of the bodies of knowledge of both the PMI (the American Project Management Institute) and the APM (the British Association of Project Managers). Provides coverage of improvements in communications through the Internet and mobile telephones, and the implications of these changes for project managers. Includes numerous worked examples and practical exercises, which introduce the reader to the latest planning and control techniques. A website, for lecturers adopting Project Management, containing additional worked examples and exercises, together with PowerPoint slides can be found at: [www.wiley.co.uk/burke4ed](http://www.wiley.co.uk/burke4ed).

This National Infrastructure Plan sets out the strategy for meeting the infrastructure needs of the UK economy. There are three elements to this strategy. First, the Government will plan for the medium term and across sectors. The Plan brings together a comprehensive cross-sectoral analysis of the UK's infrastructure networks and sets out a clear pipeline of over 500 infrastructure projects. Delivering these projects will ensure that the overall performance of the UK's infrastructure is maintained and improved over time. Second, to mobilise the finance required to deliver these projects, the Plan sets out a new approach to coordinating public and private investment in UK infrastructure. Funded through further reductions in current spending, additional investment in infrastructure is being announced. The Government will act to facilitate the private investment that will finance the majority of the UK's infrastructure. This includes bringing in new investors into UK infrastructure; introducing new sources of revenue such as tolling; allowing local authorities more flexibility in the way they use local receipts to fund major infrastructure in specific circumstances; and being willing to consider guarantees against specific risks that the market cannot bear. Third, the Government will take an active role in ensuring the infrastructure in the Plan is delivered efficiently and on time, with priority given to those projects most critical for economic growth. The Government is also reforming the planning and consenting systems to tackle these sources of cost and delay in infrastructure delivery.

Multidisciplinary collection of essays on the relationship of infertility and the "historic" STIS-gonorrhoea, chlamydia, and syphilis-producing surprising new insights in studies from across the globe and spanning millennia.
