extraordinary.”—Toni Morrison In this lyrical, unsentimental, and compelling memoir, the son of a black African father and a white American mother searches for a workable meaning to his life as a black American. It begins in New York, where Barack Obama learns that his father—a figure he knows more as a myth than as a man—has been killed in a car accident. This sudden death inspires an emotional odyssey—first to a small town in Kansas, from which he retraces the migration of his mother’s family to Hawaii, and then to Kenya, where he meets the African side of his family, confronts the bitter truth of his father’s life, and at last reconciles his divided inheritance. crew of a rescue vessel that had intended to leave him to die. When it comes to pop culture, Alfred Bester (1913-1987) is something of an unsung hero. He wrote radio scripts, screenplays, and comic books (in which capacity he created the original Green Lantern Oath). But Bester is best known for his science-fiction novels, and *The Stars My Destination* may be his finest creation. With its sly potshotting at corporate skullduggery, *The Stars My Destination* seems utterly contemporary, and has maintained its status as an underground classic for fifty years. (Bester fans should also note that iPicturebooks has reprinted *The Demolished Man*, which won the very first Hugo Award in 1953.) Alfred Bester was among the first important authors of contemporary science

alarm on the mathematical models that pervade modern life -- and threaten to rip apart our social fabric We live in the age of the algorithm. Increasingly, the decisions that affect our lives--where we go to school, whether we get a car loan, how much we pay for health insurance--are being made not by humans, but by mathematical models. In theory, this should lead to greater fairness: Everyone is judged according to the same rules, and bias is eliminated. But as Cathy O'Neil reveals in this urgent and necessary book, the opposite is true. The models being used today are opaque, unregulated, and uncontestable, even when they're wrong. Most troubling, they reinforce discrimination: If a poor student can't get a loan because a lending model deems him too risky (by virtue of his zip code), he's then cut off

from the kind of education that could pull him out of poverty, and a vicious spiral ensues. Models are propping up the lucky and punishing the downtrodden, creating a "toxic cocktail for democracy." Welcome to the dark side of Big Data. Tracing the arc of a person's life, O'Neil exposes the black box models that shape our future, both as individuals and as a society. These "weapons of math destruction" score teachers and students, sort resumes, grant (or deny) loans, evaluate workers, target voters, set parole, and monitor our health. O'Neil calls on modelers to take more responsibility for their algorithms and on policy makers to regulate their use. But in the end, it's up to us to become more savvy about the models that govern our lives. This important book empowers us to ask the tough

"Hell is empty, and all the devils are here." -Shakespeare, The Tempest As soon as the financial crisis erupted, the finger-pointing began. Should the blame fall on Wall Street, Main Street, or Pennsylvania Avenue? On greedy traders, misguided regulators, sleazy

subprime companies, cowardly legislators, or clueless home buyers? According to Bethany McLean and Joe Nocera, two of America's most acclaimed business journalists, the real answer is all of the above-and more. Many devils helped bring hell to the economy. And the full story, in all of its complexity and detail, is like the legend of the blind men and the elephant. Almost everyone has missed the big picture. Almost no one has put all the pieces together. *All the Devils Are Here* goes back several decades to weave the hidden history of the financial crisis in a way no previous book has done. It explores the motivations of everyone from famous CEOs, cabinet secretaries, and politicians to anonymous lenders, borrowers, analysts, and Wall Street traders. It delves into the powerful

American mythology of homeownership. And it proves that the crisis ultimately wasn't about finance at all; it was about human nature. Among the devils you'll meet in vivid detail:

- Angelo Mozilo, the CEO of Countrywide, who dreamed of spreading homeownership to the masses, only to succumb to the peer pressure-and the outsized profits-of the sleaziest subprime lending.
- Roland Arnall, a respected philanthropist and diplomat, who made his fortune building Ameriquest, a subprime lending empire that relied on blatantly deceptive lending practices.
- Hank Greenberg, who built AIG into a Rube Goldberg contraption with an undeserved triple-A rating, and who ran it so tightly that he was the only one who knew where all the bodies were buried.
- Stan O'Neal of Merrill

Lynch, aloof and suspicious, who suffered from "Goldman envy" and drove a proud old firm into the ground by promoting cronies and pushing out his smartest lieutenants. • Lloyd Blankfein, who helped turn Goldman Sachs from a culture that famously put clients first to one that made clients secondary to its own bottom line. • Franklin Raines of Fannie Mae, who (like his predecessors) bullied regulators into submission and let his firm drift away from its original, noble mission. • Brian Clarkson of Moody's, who aggressively pushed to increase his rating agency's market share and stock price, at the cost of its integrity. • Alan Greenspan, the legendary maestro of the Federal Reserve, who ignored the evidence of a growing housing bubble and turned a blind eye to the lending practices that ultimately

brought down Wall Street-and inflicted enormous pain on the country. Just as McLean's *The Smartest Guys in the Room* was hailed as the best Enron book on a crowded shelf, so will *All the Devils Are Here* be remembered for finally making sense of the meltdown and its consequences.

bookdown: Authoring Books and Technical Documents with R
Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and

references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript,

and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.
