### [THE ROCK CYCLE](#)

The Rock Cycle. There are three main types of rocks: sedimentary, igneous, and metamorphic. Each of these rocks are formed by physical changes—such as melting, cooling, eroding, compacting, or deforming—that are part of the rock cycle. Sedimentary rocks are formed from pieces of other existing rock or organic material.

The Rock Cycle - Fill in the Gaps Illustration. 4.4 14 customer reviews. Author: Created by katie-lu. Preview. Created: Mar 9, 2014 | Updated: Mar 12, 2014. An illustration of the rock cycle, with gaps for each process and type of rock. The words to fill in the gaps are listed, but must be placed in the correct part of the cycle.

### The Rock Cycle - Fill in the Gaps Illustration | Teaching ...

The rock cycle. Rocks gradually wear away, a process called weathering. Biological, chemical and physical weathering are three types of weathering. Weathering and erosion are part of the rock cycle.

### Biological weathering - The rock cycle - KS3 Chemistry ...

The rock cycle is a never-ending process in which rocks continually shift and change over millions of years. Heating. Heat and pressure deep in the Earth can make rock change into a different type, called metamorphic rock. Intense heating. If the heat is very intense, both sedimentary and metamorphic rock can get so hot they turn into magma.
