The static electric charges that cause lightning are generated by the action of wind and rain transporting electrons between clouds and earth, or between clouds. Particles of dust may also transport electrons in the same manner, which accounts for the spectacular discharges of lightning often seen during massive uprisings of dust, such as during volcanic eruptions.

This is addressed by using a static charge eliminator: a comb with very fine conducting threads or brushes that touch the paper sheet at many points on a single line perpendicular to the direction of paper motion. The threads rub the paper as it gets out of the printer; due to close proximity of the conducting threads and the paper, the threads and then the comb is able to collect and leak out excessive charge from the paper.

Have you ever been shocked by touching a doorknob? Do you know what causes the shock? Written for students in grade 4, *Static Electricity and Lightning* explains static electricity and how it relates to lightning. This 22-page book includes a glossary of bold-faced vocabulary words, reading activities, an index of terms, and an answer key.

The 15 lessons in this module introduce students to static and current electricity and electricity from chemical sources. Students investigate parallel and series circuits, conductors, insulators, and switches and design and construct their own electrical devices based on their learning. As well, students explore electromagnetism, motors, generators, and renewable and non-renewable sources of electricity. Students also investigate the environmental impact of human consumption and conservation of electrical energy. Also included: * Materials lists; * Activity descriptions; * Questioning techniques; * Activity centre and extension ideas; * Assessment suggestions; and * Activity sheets and visuals. The module offers a detailed introduction to the Hands-On Science program (guiding principles, implementation guidelines, an overview of the skills that young students use and develop during scientific inquiry), a list of children's books and websites related to the science topics introduced, and a classroom assessment plan with record-keeping templates.

Hands-On Science and Technology: An Inquiry Approach is filled with a year's worth of classroom-tested activity-based lesson plans. The grade 6 book is divided into four units based on the current Ontario curriculum for science and technology. *Biodiversity Flight Electricity and Electrical Devices Space* This new edition includes many familiar great features for both teachers and students: curriculum correlation charts; background information on the science and technology topics; complete, easy-to-follow lesson plans; reproducible student materials; materials lists; and hands-on, student-centred activities. Useful new features include: the components of an inquiry-based scientific and technological approach Indigenous knowledge and perspective embedded in lesson plans a four-part instructional process—activate, action, consolidate and debrief, and enhance an emphasis on technology, sustainability, and differentiated instruction a fully developed assessment plan that includes opportunities for assessment for, as, and of learning a focus on real-life technological problem solving learning centres that focus on multiple intelligences and universal design for learning (UDL) land-based learning activities a bank of science related images

The activities in this book provide an introduction to the basic concepts of electricity. Material teaches students about static electricity and electrical charges, current, battery cells, conductors and insulators, and more. Work is suitable for individuals, small groups, or class instruction. General background information, suggested activities, questions for discussion, and answers are included.
