Potassium is a chemical element with symbol K (derived from Neo-Latin, kalium) and atomic number 19. It was first isolated from potash, the ashes of plants, from which its name is derived. In the Periodic table, potassium is one of seven elements in column (group) 1 (alkali metals); they all have a single valence electron in their outer electron shell, which they readily give up to create an ...

Professor Imamoto is a pioneer in the use of phosphine–boranes for the synthesis of chiral phosphine ligands. He designed and synthesized many new P-chiral phosphine ligands and demonstrated their superior performance in asymmetric catalysis. The air-stable P-chiral phosphine ligand QuinoxP* is widely used in both academia and industry.
