Be the Light takes readers to a magical place where secrets are revealed and questions answered – like “Why am I here?” “What is my purpose?” “How can I live an inspiring life?” Travel along to the Kingdom of the Light with Dr. Karen Campten who asks these age-old questions and uncovers glimpses of meaning in forgotten music, a light-filled bouquet of flowers, and the company of her oldest friends, her beloved cousin, and the grandchildren of the next generation. Liz Crisostomo offers a compelling and inspiring story where each seeker and reader will no doubt recognize something of themselves in Karen, Brian, Lola, Trevor, Shasha, their friends and family who are woven throughout her story. You will be moved by their strength and courage, stirred by their laughter, and become sympathetic to their pain and sadness. By getting to know the characters Liz has so lovingly created, you will begin to understand why you have the talents you have, where they’ve come from, and why you were blessed with these particular gifts.

Análisis de fallos en sistemas aeronáuticos es un libro cuya génesis es la investigación del aspecto técnico de la industria aeroespacial, con una perspectiva interdisciplinaria y una visión integral de aporte a la seguridad operacional. Se trata de una obra de utilidad para todos los sectores y especialidades de la actividad aeronáutica. Los contenidos y el análisis son de interés en la seguridad operacional tanto de los operadores comerciales como de la aviación general o las organizaciones militares con medios aéreos. A través de los avances técnicos y la investigación de accidentes y sucesos inseguros, la industria ha logrado incrementar los niveles de seguridad; con ese criterio está estructurada la obra. Desde los primeros contactos del hombre con los fallos de sus rudimentarias herramientas hasta los complejos materiales compuestos que hoy utiliza la industria aeroespacial, esta obra contempla el amplio espectro de materias primas, propiedades intrínsecas, comportamiento típico y propensión a fallos, a través de una visión y un análisis interdisciplinario y sistémico. El texto está estructurado de modo que el lector pueda utilizar este libro como lectura técnica o como manual de consulta sobre temas específicos. La cronología de los temas se ha desarrollado desde un marco histórico evolutivo, partiendo desde las materias primas y las técnicas de fabricación, los conceptos de estructuras aeronáuticas, la mecánica de fractura, el análisis de fallos (con y sin fractura), la mecánica de fatiga, los protocolos de análisis e investigación internacionales, los factores humanos y organizacionales en el área técnica, hasta un compendio de casos típicos que posibilita la fácil comprensión de conceptos abstractos. La obra se estructura en 13 capítulos, desarrollados con un enfoque académico teórico, un marco histórico referencial y procesos de comprobación analítica. De igual modo, en todos los casos y capítulos se han utilizado datos, imágenes y gráficos obtenidos de investigaciones reales de fallos en servicio en la industria aeronáutica. Asimismo, el libro se nutre de gran cantidad de información obtenida durante el proceso de investigación técnica y detección de fallos en accidentes e incidentes de aviación. Como se indicaba anteriormente, la obra en su conjunto presenta una marcada visión sistémica cuyo objetivo es hallar las causas profundas de los fallos y las condiciones latentes presentes en el sistema que propician los accidentes e incidentes. El autor, investigador técnico de accidentes de aviación, lleva más de 15 años dedicado al estudio de la seguridad operacional desde el ámbito técnico, por lo que ha participado en la investigación de accidentes de aviación de transporte, aviación general y aviación deportiva. Actualmente desempeña su labor profesional en la autoridad aeronáutica de la República Argentina como director nacional de investigaciones. También ha sido docente de temas técnicos específicos de investigación y es autor de otros trabajos y obras relacionados con este ámbito.
