Annotation This report examines the possibility that global demand for capital will tend to outstrip supply, thus putting upward pressure on global real interest rates. The paper discusses the demand for foreign capital in developing countries, the effect of this demand on savings in industrial countries, and net capital flows from industrial to developing countries. The analysis of trends over the next 10 to 15 years suggests that a large rise in international real interest rates is unlikely as long as fiscal consolidation in industrial countries remains on track.

The advent of complex intelligent structures and low-voltage electronic installations within buildings requires increasingly sophisticated lightning protection techniques. As a multimedia book, Understanding Lightning and Lightning Protection is a unique, interactive self-teaching tool that provides an in-depth understanding of lightning protection. Understanding Lightning and Lightning Protection helps the reader to understand the propagation of waves within complex intelligent structures within buildings, and the operation of systems designed to protect these structures. It also comments on proper human behaviour during a lightning thunderstorm. Accompanied by a web-based animation program <http://www.wiley.com/go/horvath> Shows the fundamental processes of the lightning phenomenon, and helps the reader to understand the measures of protection against lightning damage. Offers a new theory and calculation method to estimate the efficiency of lightning air termination systems, which helps to evaluate the residual risk of the lightning protection system. Examines the propagation of waves and the associated protection of intelligent systems against lightning electromagnetic impulses. This interactive teaching tool is designed for senior undergraduate and postgraduate students in electrical engineering, construction, physics and meteorology. It will also provide a valuable resource for practitioners within electric power distribution, electronics, informatics & construction safety.

World Bank Discussion Paper No. 292. Examines the anatomy of the Republic of Korea's financial reform policy since 1979 in order to place the nation's financial reform plan of 1993 in a proper context. Financial deregulation in the Republic of Korea, initiated in 1979, coincided with similar programs in South America and East Asia. The reforms were successful in spite of a mild form of financial repression and a deregulation policy that ran an erratic course. The republic moved decisively in 1993 toward a conventional type of financial liberalization by announcing a blueprint of reforms to be implemented over a five-year period ending in 1997. This paper examines the anatomy of the Korean financial reform policy since 1979 in order to place its financial reform plan of 1993 in the proper context. The report presents a conceptual framework of the Korean financial system and policies, examines interest rate reforms on various levels, and discusses changes in the credit allocation system that were undertaken in earlier phases of the reforms. The book goes on to review the rationale of the final financial reform phase, the sequencing of its various elements, and the assessment. Broad conclusions are presented.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
