A warm, heartfelt memoir of family, loss, and a house jam-packed with decades of goods and memories. After almost twenty years of caring for elderly parents—first for their senile father, and then for their cantankerous ninety-three-year old mother—author Plum Johnson and her three younger brothers have finally fallen to their middle-aged knees with conflicted feelings of grief and relief. Now they must empty and sell the beloved family home, twenty-three rooms bulging with history, antiques, and oxygen tanks. Plum thought: How tough will that be? I know how to buy garbage bags. But the task turns out to be much harder and more rewarding than she ever imagined. Items from childhood trigger difficult memories of her eccentric family growing up in the 1950s and '60s, but unearthing new facts about her parents helps her reconcile those relationships, with a more accepting perspective about who they were and what they valued. *They Left Us Everything* is a funny, touching memoir about the importance of preserving family history to make sense of the past, and nurturing family bonds to safeguard the future.

Transportation Cyber-Physical Systems provides current and future researchers, developers and practitioners with the latest thinking on the emerging interdisciplinary field of Transportation Cyber Physical Systems (TCPS). The book focuses on enhancing efficiency, reducing environmental stress, and meeting societal demands across the continually growing air, water and land transportation needs of both people and goods. Users will find a valuable resource that helps accelerate the research and development of transportation and mobility CPS-driven innovation for the security, reliability and stability of society at-large. The book integrates ideas from Transport and CPS experts and visionaries, consolidating the latest thinking on the topic. As cars, traffic lights and the built environment are becoming connected and augmented with embedded intelligence, it is important to understand how smart ecosystems that encompass hardware, software, and physical components can help sense the changing state of the real world. Bridges the gap between the transportation, CPS and civil engineering communities Includes numerous examples of practical applications that show how diverse technologies and topics are integrated in practice Examines timely, state-of-the-art topics, such as big data analytics, privacy, cybersecurity and smart cities Shows how TCPS can be developed and deployed, along with its associated challenges Includes pedagogical aids, such as Illustrations of application scenarios, architecture details, tables describing available methods and tools, chapter objectives, and a glossary Contains

international contributions from academia, government and industry

Carabid ground beetles, sometimes called "walking jewels", are among the most thoroughly investigated insects in the world. This book presents the results of molecular phylogenetic analyses of 2000 specimens, including 350 species and that cover more than 90% of the known genera, from 500 localities in 35 countries. These comprehensive analyses using mitochondrial DNA-based dating suggest that carabid diversification took place about 40 to 50 million years ago as an explosive radiation of the major genera, coinciding with the collision of the Indian subcontinent and Eurasian land mass. The analyses also lead to surprising conclusions suggesting discontinuous evolution and parallel morphological evolution. With numerous color illustrations, this book presents readers with the dynamic principles of evolution and the magnificent geographic history of the earth as revealed by the study of beetles.

Michael Gerhard examines the likely political and constitutional consequences of President Clinton's impeachment and trial. Placing the President's acquittal in historical perspective he argues that it is consistent with the process as it has evolved over the last two centuries.

The American North Russian Expeditionary Force consisted of the 339th Infantry, which had been known at Camp Custer as "Detroit's Own", one battalion of the 310th Engineers, the 337th Ambulance Company, and the 337th Field Hospital company. The force numbered in all, about five thousand five hundred men.

Using the factor analysis of information risk (FAIR) methodology developed over ten years and adopted by corporations worldwide, Measuring and Managing Information Risk provides a proven and credible framework for understanding, measuring, and analyzing information risk of any size or complexity. Intended for organizations that need to either build a risk management program from the ground up or strengthen an existing one, this book provides a unique and fresh perspective on how to do a basic quantitative risk analysis. Covering such key areas as risk theory, risk calculation, scenario modeling, and communicating risk within the organization, Measuring and Managing Information Risk helps managers make better business decisions by understanding their organizational risk. Uses factor analysis of information risk (FAIR) as a methodology for measuring and managing risk in any organization. Carefully balances theory with practical applicability and relevant stories of successful implementation. Includes examples from a wide variety of businesses and situations presented in an accessible writing style.

The cosmic patterns and universal truths of sacred geometry bridge past and future. Now you can put this ancient wisdom to work in your own life with The Sacred Geometry Oracle. This kit contains 33 cards, each representing a basic figure in traditional sacred geometry and each relating to one of the basic patterns of the universe--patterns that form the hidden structure of our everyday lives. Use the cards for divination, meditation, and self-exploration.
