dominant economic power tends to possess the world's dominant currency, and that the dominance of that currency can continue even after other, more dynamic economics powers surpass the issuer of it. The paradigmatic example is Great Britain, which had the world's biggest economy and the dominant currency in the nineteenth century. Yet even as it faded relative to the US and Germany, the pound sterling remained the world's reserve currency well into the twentieth century. Only massive systemic shocks like the Great Depression and World War Two could knock the pound from its perch. The story of the US economy and the dollar after the war is a similar one, and many expect that the dollar will eventually lose its pre-eminence to Chinese the renminbi at some point after the Chinese economy surpasses the US economy in size. China is certainly a clear rival to the US, but as Barry Eichengreen, Marc Flandreau, Arnaud

Mehl and Livia Chitu argue, economics is not a zero-sum game. In *International Currencies, Past, Present, and Future*, they draw from innovative data sets to argue that several national currencies can play an important role in the global economy all at once. Rather than focusing on how one currency dominates, then, we should look at currency systems as networks. While there may be a clear leader, that does not mean that other major currencies cannot serve as international reserve hedges. Indeed, even in the late twentieth century, when US power was at a geopolitical apex, roughly 40 percent of global foreign exchange reserves were not in dollar form. The late nineteenth and early twentieth centuries were similarly multipolar with regard to foreign exchange reserve holdings, with the mark, the franc, and the dollar all playing important roles in a system in which the pound led. If past is prologue, we can look forward to a multipolar system in which

the dollar and euro will continue to be important international currencies even if the renminbi surpasses the dollar - and the jury is out on that. Deeply informed by history, this powerfully revisionist account of how the international monetary system operates will not only transform our understanding of the past, but also force us to reconsider our expectations of how the system will evolve in future decades.

A World of Struggle reveals the role of expert knowledge in our political and economic life. As politicians, citizens, and experts engage one another on a technocratic terrain of irresolvable argument and uncertain knowledge, a world of astonishing inequality and injustice is born. In this provocative book, David Kennedy draws on his experience working with international lawyers, human rights advocates, policy professionals, economic development specialists,

military lawyers, and humanitarian strategists to provide a unique insider's perspective on the complexities of global governance. He describes the conflicts, unexamined assumptions, and assertions of power and entitlement that lie at the center of expert rule. Kennedy explores the history of intellectual innovation by which experts developed a sophisticated legal vocabulary for global management strangely detached from its distributive consequences. At the center of expert rule is struggle: myriad everyday disputes in which expertise drifts free of its moorings in analytic rigor and observable fact. He proposes tools to model and contest expert work and concludes with an in-depth examination of modern law in warfare as an example of sophisticated expertise in action. Charting a major new direction in global governance at a moment when the international order is ready for change, this critically important book explains how we can harness

The technological revolution has reached around the world, with important consequences for business, government, and the labor market. Computer-aided design, telecommunications, and other developments are allowing small players to compete with traditional giants in manufacturing and other fields. In this volume, 16 engineering and industrial experts representing eight countries discuss the growth of technological advances and their impact on specific industries and regions of the world. From various perspectives, these distinguished commentators describe the practical aspects of technology's reach into business and trade.

economies at war from 1914 to 1918. It studies how European economies mobilised for war, how existing economic institutions stood up under the strain, how economic development influenced outcomes and how wartime experience influenced post-war economic growth. Leading international experts provide the first systematic comparison of economies at war between 1914 and 1918 based on the best available data for Britain, Germany, France, Russia, the USA, Italy, Turkey, Austria-Hungary and the Netherlands. The editors' overview draws some stark lessons about the role of economic development, the importance of markets and the damage done by nationalism and protectionism. A companion volume to the acclaimed *The Economics of World War II*, this is a major contribution to our understanding of total war.

The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments sought to seize and control the 'commanding heights' of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, **THE COMMANDING HEIGHTS** shows how a revolution in ideas is

Historically, national security includes the strength of our nation's infrastructure, the foundation upon which the continuous growth of our society depends. This includes our strong societal and moral codes, the rule of law, stable government, social, political, and economic institutions, and leadership. Also included are our nation's schools and educational programs to ensure a knowledgeable citizenry and lifelong learning—a must for a democracy. Our nation's strength also requires investments in science, engineering, research and development, and technological leadership. We cannot be strong

without a viable way to power our cities, feed ourselves, and move from one place to another. Most of all, a strong economy is an essential ingredient of a global superpower. Without it, we will lose our superpower status, and quickly. National security must include a healthy market-based economy, with a strong base of globally competitive products and services that produce jobs. This economy must include sound government policies to promote responsible choices and reduce our debt, and grand strategies for energy and environmental sustainability, science and technology leadership (at least in some areas), human capital capabilities, manufacturing, and the industrial base. And these are not the only components. National security goes to the very core of how we define who we are as a people and a free society. It concerns how we view our world responsibilities. Economic security is a major element of national security, even as

borders are less important than ever. No matter how we look at national security, there can be no question of the need to include the economic viability of our nation. Without capital, there is no business; without business, there is no profit; without profit, there are no jobs. And without jobs, there are no taxes, and there is no military capability. The viability of a nation's industrial infrastructure, which provides jobs for its people, creates and distributes wealth, and leverages profits, is essential. Without jobs, the quality of peoples' lives deteriorates to a point where society itself can disintegrate. It can also lead to strife on many different levels. As a nation, we need to find a strategy to deal with this, and we will discuss the ideas of expeditionary economics. But poverty is not only a problem in Third World countries. It can occur at home, too-especially during a deep recession. No community, local or global, can sustain indefinitely whole

populations of "haves" and "have nots." And that gap is now growing within the United States. There is no question that a part of the infrastructure of a nation must include a sound economy. It was the relative deterioration of the Japanese and German economies that led those nations into World War II. Poverty around the world is a global systemic issue that frequently can and does lead to political instability. But we cannot help others if we cannot help ourselves, and our current economic crisis is a warning. National security is societal, political, and economic strength. In today's world, national security for a superpower is meaningless without a strong military capability as well. The sovereignty and security of the United States, and the protection of its citizens and property around the world, remain the bedrock of national security. The execution of U.S. national security strategy is conducted in a highly volatile global environment characterized by

This paper analyzes the extent of income inequality from a global perspective, its drivers, and what to do about it. The drivers of inequality vary widely amongst countries, with some common drivers being the skill premium associated with technical change and globalization, weakening protection for labor, and lack of financial inclusion in developing countries. We find that increasing the income share of the poor and the middle class actually increases growth while a rising income share of the top 20 percent results in lower growth—that is, when the rich get richer, benefits do not trickle down. This suggests that policies need to be country specific but should focus on raising the income share of the poor, and ensuring there is no hollowing out of the
